

# Recent progress in the development of the European 1 MW, 170 GHz CW gyrotron for ITER

Monday, October 22, 2018 5:15 PM (5 minutes)

The European 1 MW, 170 GHz industrial prototype CW gyrotron for ECRH&CD on ITER is a conventional (hollow-cavity) gyrotron, which is being developed by the European Gyrotron Consortium (EGYC) in cooperation with the industrial partner Thales Electron Devices (TED), under the coordination of the European Joint Undertaking for ITER and the Development of Fusion Energy (F4E).

The CW industrial prototype was extensively tested in the short-pulse regime (with pulse length up to 10 ms) and operated under long-pulse conditions with pulse lengths of up to 180 s, which is the limit at the High-Voltage (HV) power supply currently available at KIT.

In this contribution we report on the performance of the tube during the long-pulse operation at the KIT test facility, details regarding the operating points are presented and the long-pulse phase of the experiments with pulses up to 180 s is analyzed.

## Country or International Organization

Germany

## Paper Number

FIP/1-2Rc

**Primary author:** Dr GANTENBEIN, Gerd (Karlsruhe Institute of Technology, Institute for Pulsed Power and Microwave Technology)

**Co-authors:** Dr BRUSHI, Alexander (Istituto di Fisica del Plasma, Consiglio Nazionale delle Ricerche); Mr ZEIN, Andy (Karlsruhe Institute of Technology (KIT), IHM); Dr LECHTE, Carsten (University of Stuttgart, IGVP); Dr SCHLATTER, Christian (Swiss Plasma Center (SPC), Ecole Polytechnique Fédérale de Lausanne); Dr ALBAJAR, Ferran (European Joint Undertaking for ITER and the Development of Fusion Energy (F4E), Barcelona, E-08019, Spain); Mr LEGRAND, Francois (Thales Electron Devices); Dr LATSAS, George (Faculty of Physics, National and Kapodistrian University of Athens); Dr PAGONAKIS, Ioannis (Karlsruhe Institute of Technology (KIT), IHM); Dr TIGELIS, Ioannis (Faculty of Physics, National and Kapodistrian University of Athens); Dr HOGGE, Jean-Philippe (Swiss Plasma Center (SPC), Ecole Polytechnique Fédérale de Lausanne); Dr JIN, Jianbo (Karlsruhe Institute of Technology (KIT), IHM); Prof. JELONNEK, John (Karlsruhe Institute of Technology (KIT), IHM); Dr AVRAMIDIS, Konstantinos (Karlsruhe Institute of Technology (KIT), IHM); Prof. THUMM, Manfred (Karlsruhe Institute of Technology (KIT), IHM); Mr SCHMID, Martin (Karlsruhe Institute of Technology (KIT), IHM); Prof. TRAN, Minh Quang (Swiss Plasma Center (SPC), Ecole Polytechnique Fédérale de Lausanne); Dr SANCHEZ, Paco (European Joint Undertaking for ITER and the Development of Fusion Energy (F4E)); Dr ILLY, Stefan (Karlsruhe Institute of Technology (KIT), IHM); Dr ALBERTI, Stefano (Swiss Plasma Center (SPC), Ecole Polytechnique Fédérale de Lausanne); Dr RZESNICKI, Tomasz (Karlsruhe Institute of Technology (KIT), IHM); Mr HERMAN, Virgile (Thales Electron Devices); Dr KASPAREK, Walter (University of Stuttgart, IGVP); Dr BIN, William (Istituto di Fisica del Plasma, Consiglio Nazionale delle Ricerche); Dr IOANNIDIS, Zisis (Karlsruhe Institute of Technology (KIT), IHM)

**Presenter:** Dr ODA, Yasuhisa (Japan Atomic Energy Agency)

**Session Classification:** FIP/1 ITER Technology

**Track Classification:** FIP - Fusion Engineering, Integration and Power Plant Design
