

FUTURE POSSIBILITY OF CARBON SEQUESTRATION BY BIOMASS FUSION HYBRID SYSTEMS.

S. Konishi et al, Kyoto University, Japan

Energy systems future

Base load electricity may not make expected return of the investment.

- mismatch of future grid and demand in developing country
- tough competition with renewables

Biomass-fuel by fusion

Substitute of fossil fuels
market larger than electricity
Required Q is current
More CO₂ reduction

Fusion-Charcoal /fuel

Net negative CO₂ emission
Alternative CCS technology
with unlimited capacity
