

CONTRIBUTING TO OPENFOAM FOUNDATION RELEASE – AN EFFECTIVE CODE DEVELOPMENT STRATEGY

F. SCHLEGEL¹ AND J. PELTOLA²

1) HELMHOLTZ-ZENTRUM DRESDEN-ROSSENDORF, GERMANY

2) VTT TECHNICAL RESEARCH CENTER, FINLAND

INTRODUCTION

INTRODUCTION

COSTS FOR CFD SOFTWARE

START WRITING FROM SCRATCH

- File I/O
- Converters (file formats)
- Meshing
- Discretisation schemes
- Matrix solvers
- Parallelization
- Equations and models
- Documentation
- ...

COSTS FOR CFD SOFTWARE

WHEN START SHARING IT WITH OTHERS

Release management

- deployment, packaging, installation, ...

Quality management

- bugs, re-factoring, dependencies, validation/verification, ...

Software management

- API, new features, documentation, ...

Communication management

- coordination, advertisement, conflict management, ...

Knowledge management

COSTS FOR CFD SOFTWARE

PROVIDING OSS SOFTWARE

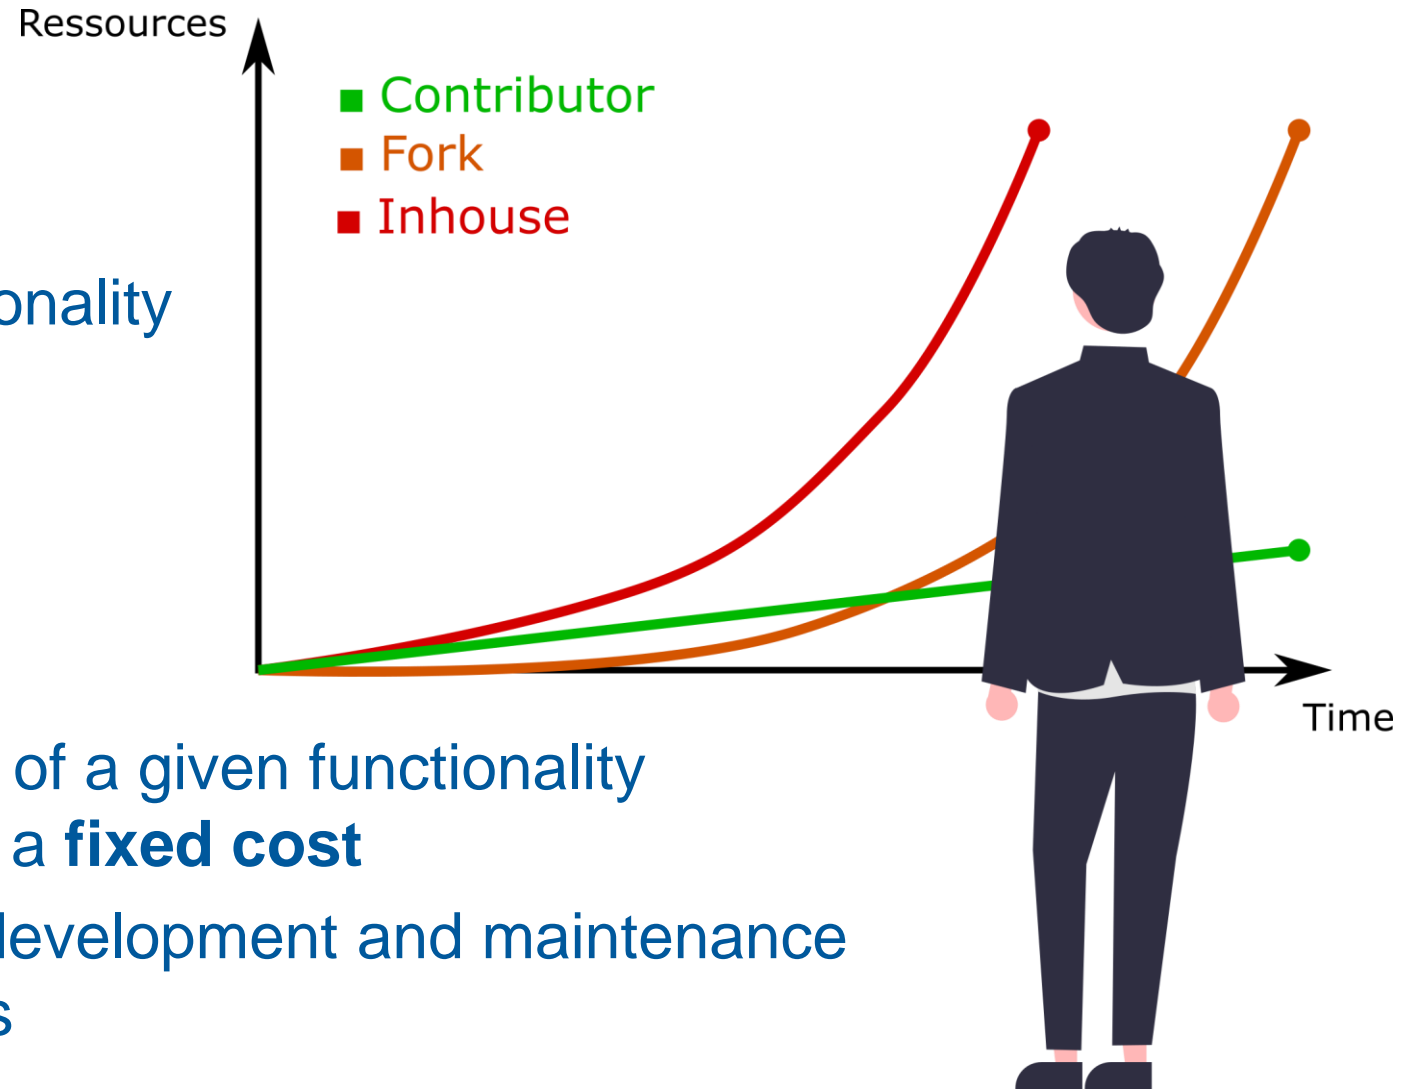

- **Cost** will **rise** over time, and you have to cover them
- **Forking** gives **head start**
- **Long-term costs** will be the same
- Limits industry transfer

COSTS FOR CFD SOFTWARE

USER OF OSS SOFTWARE

- No license fees** but still costs for
- **Development** of new functionality
 - **Maintenance** and redesign
 - Hardware
 - **User know how**

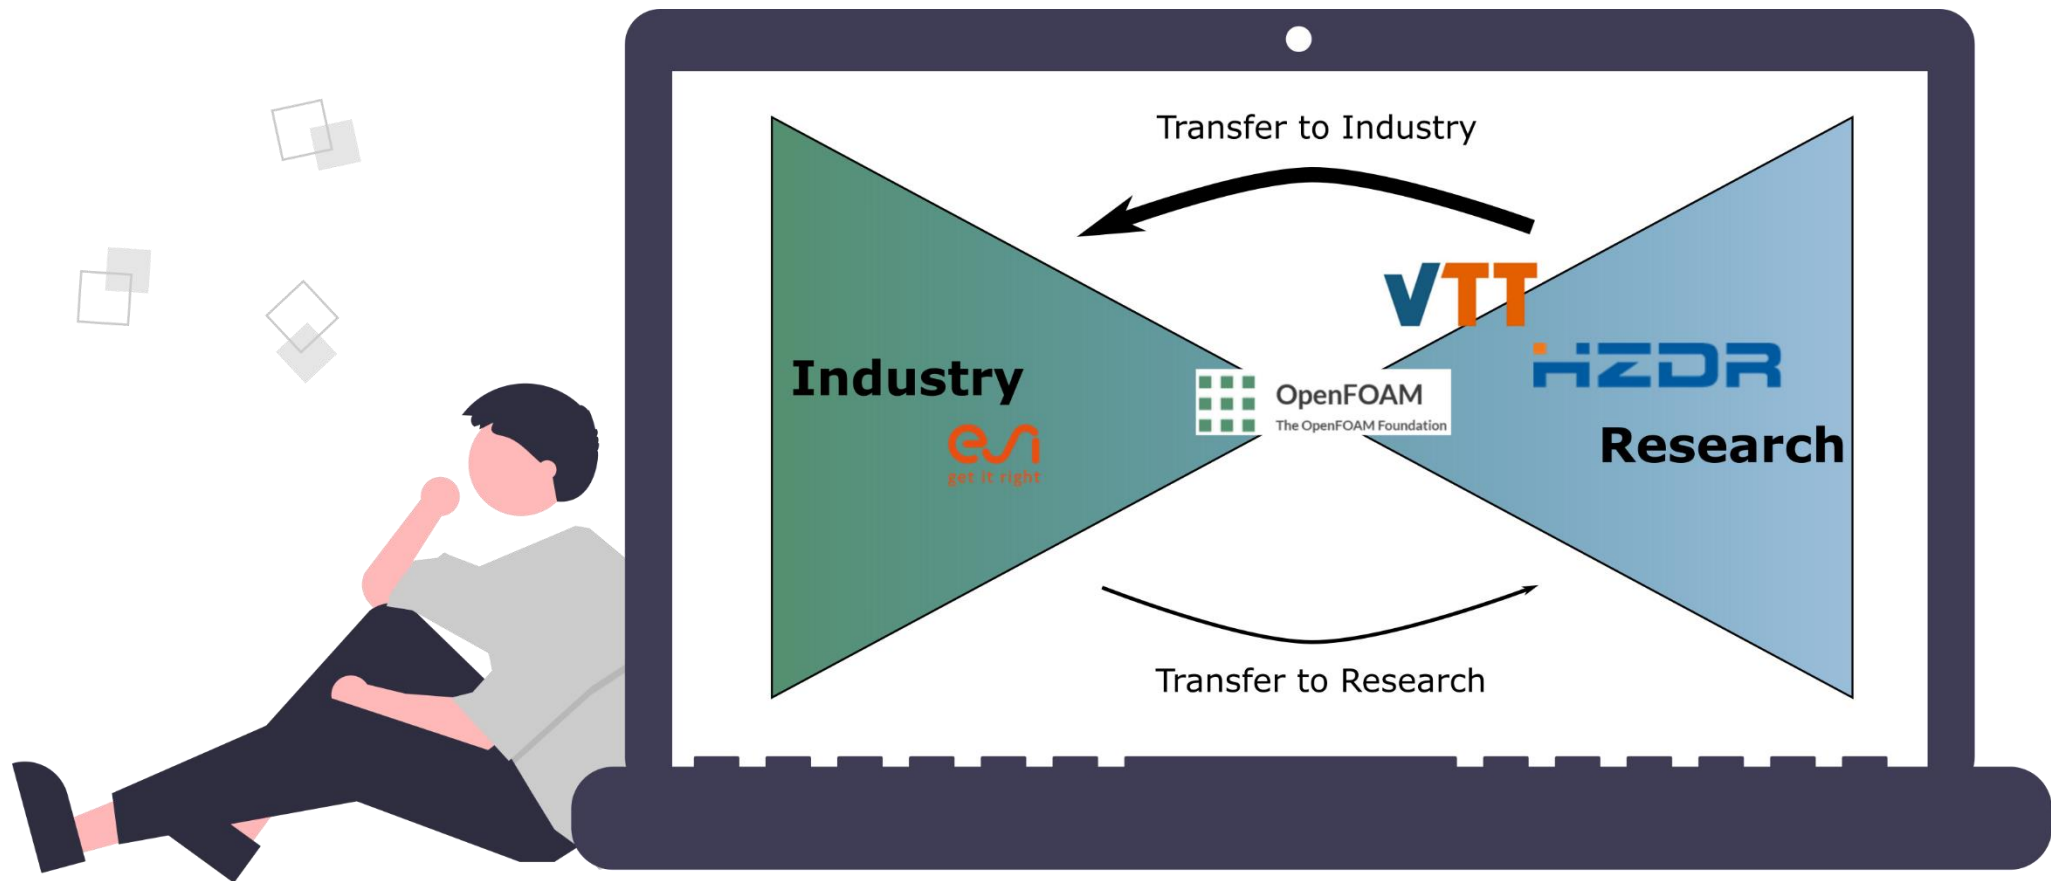

Development and maintenance of a given functionality and implementation is essentially a **fixed cost**

► key to cost efficiency: spread development and maintenance cost across multiple organizations

CONTRIBUTION TO OPENFOAM

WHY OPENFOAM FOUNDATION RELEASE

CONTRIBUTION TO OPENFOAM

ACTIVE COLLABORATION AROUND OPENFOAM FOUNDATION

Principal contributors

OpenFOAM_RCS

*pending export permit

CONTRIBUTION TO OPENFOAM

CONTRIBUTOR WITH ADDON

CONTRIBUTION TO OPENFOAM

SOFTWARE QUALITY

Feasibility Prototype

- Validate individual features
- Check feasibility
- Extremely important

Preliminary Product Prototype

- Interplay of components
- Identify limitations and shortcomings
- Selected features

Demonstration Prototype

- Most of the features and functions
- Start user testing

Core Maintainers

Production Software

- All features
- Fully optimized
- Production ready

Grasshopper
test vehicle

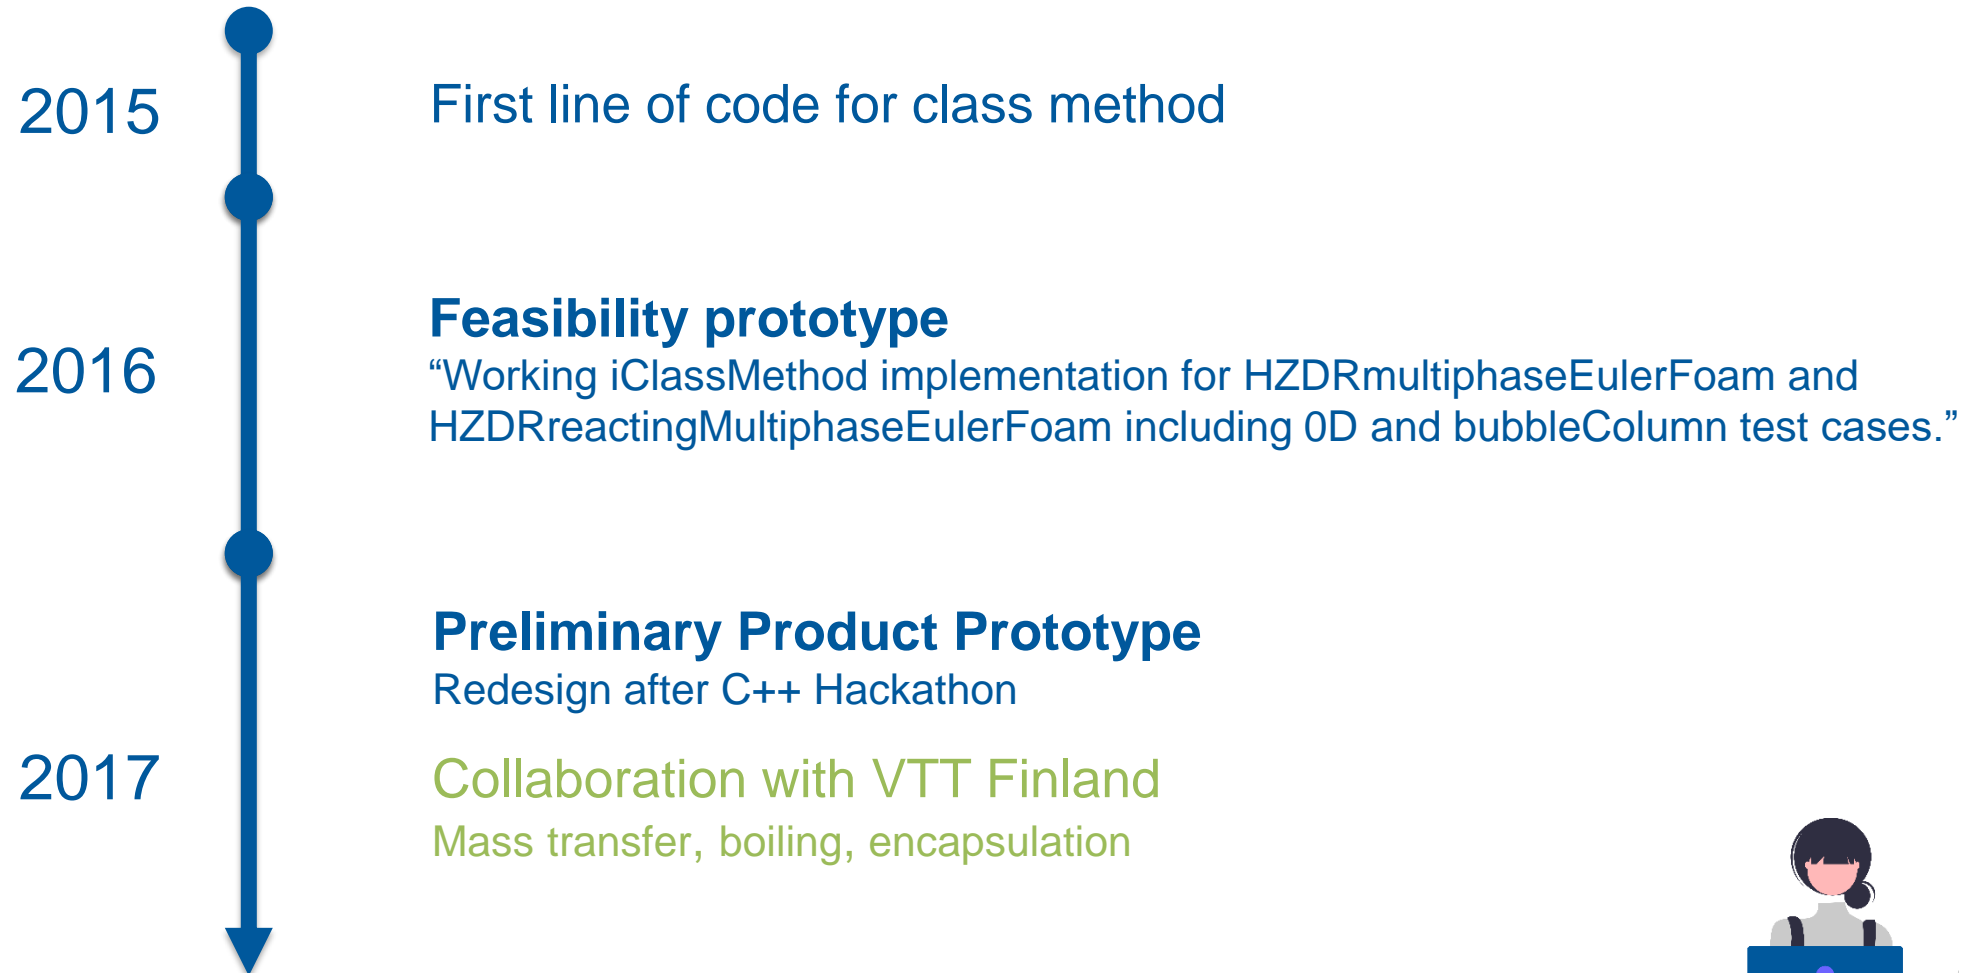

Falcon 9R
Test Vehicle

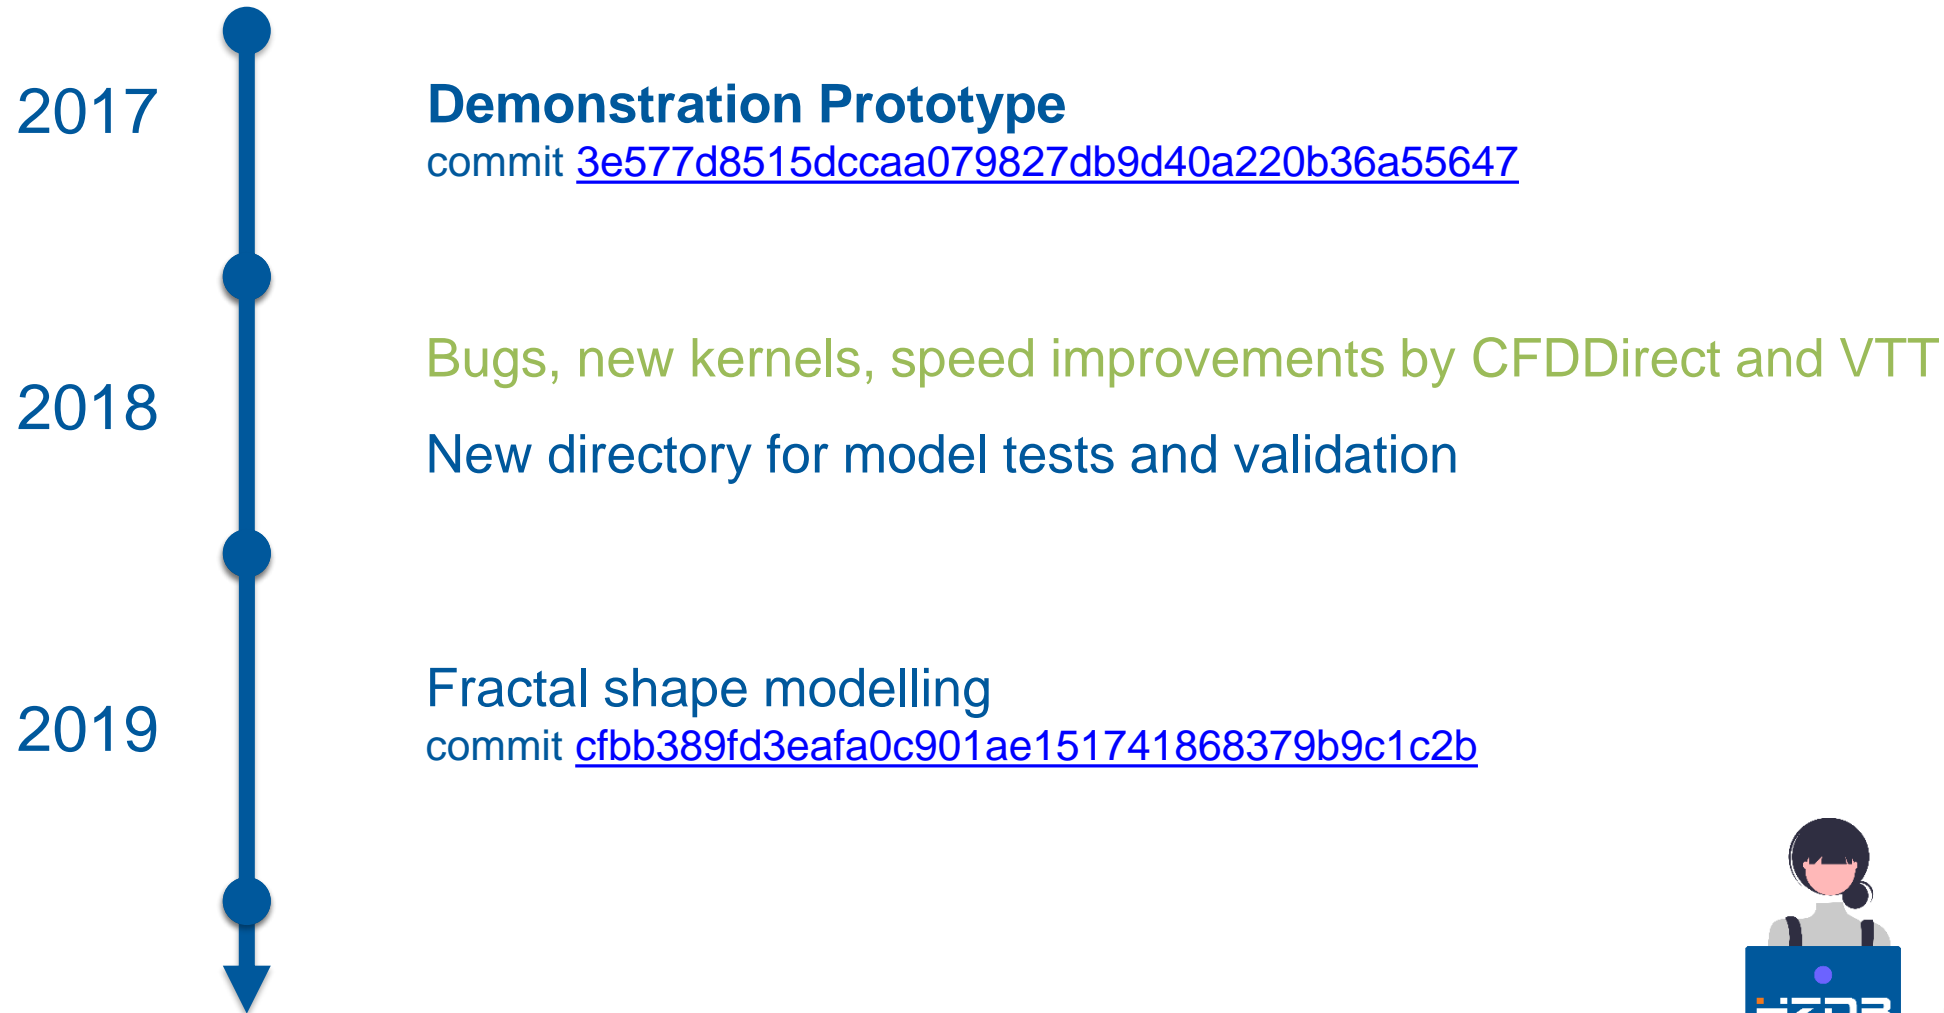

Falcon 9 FT

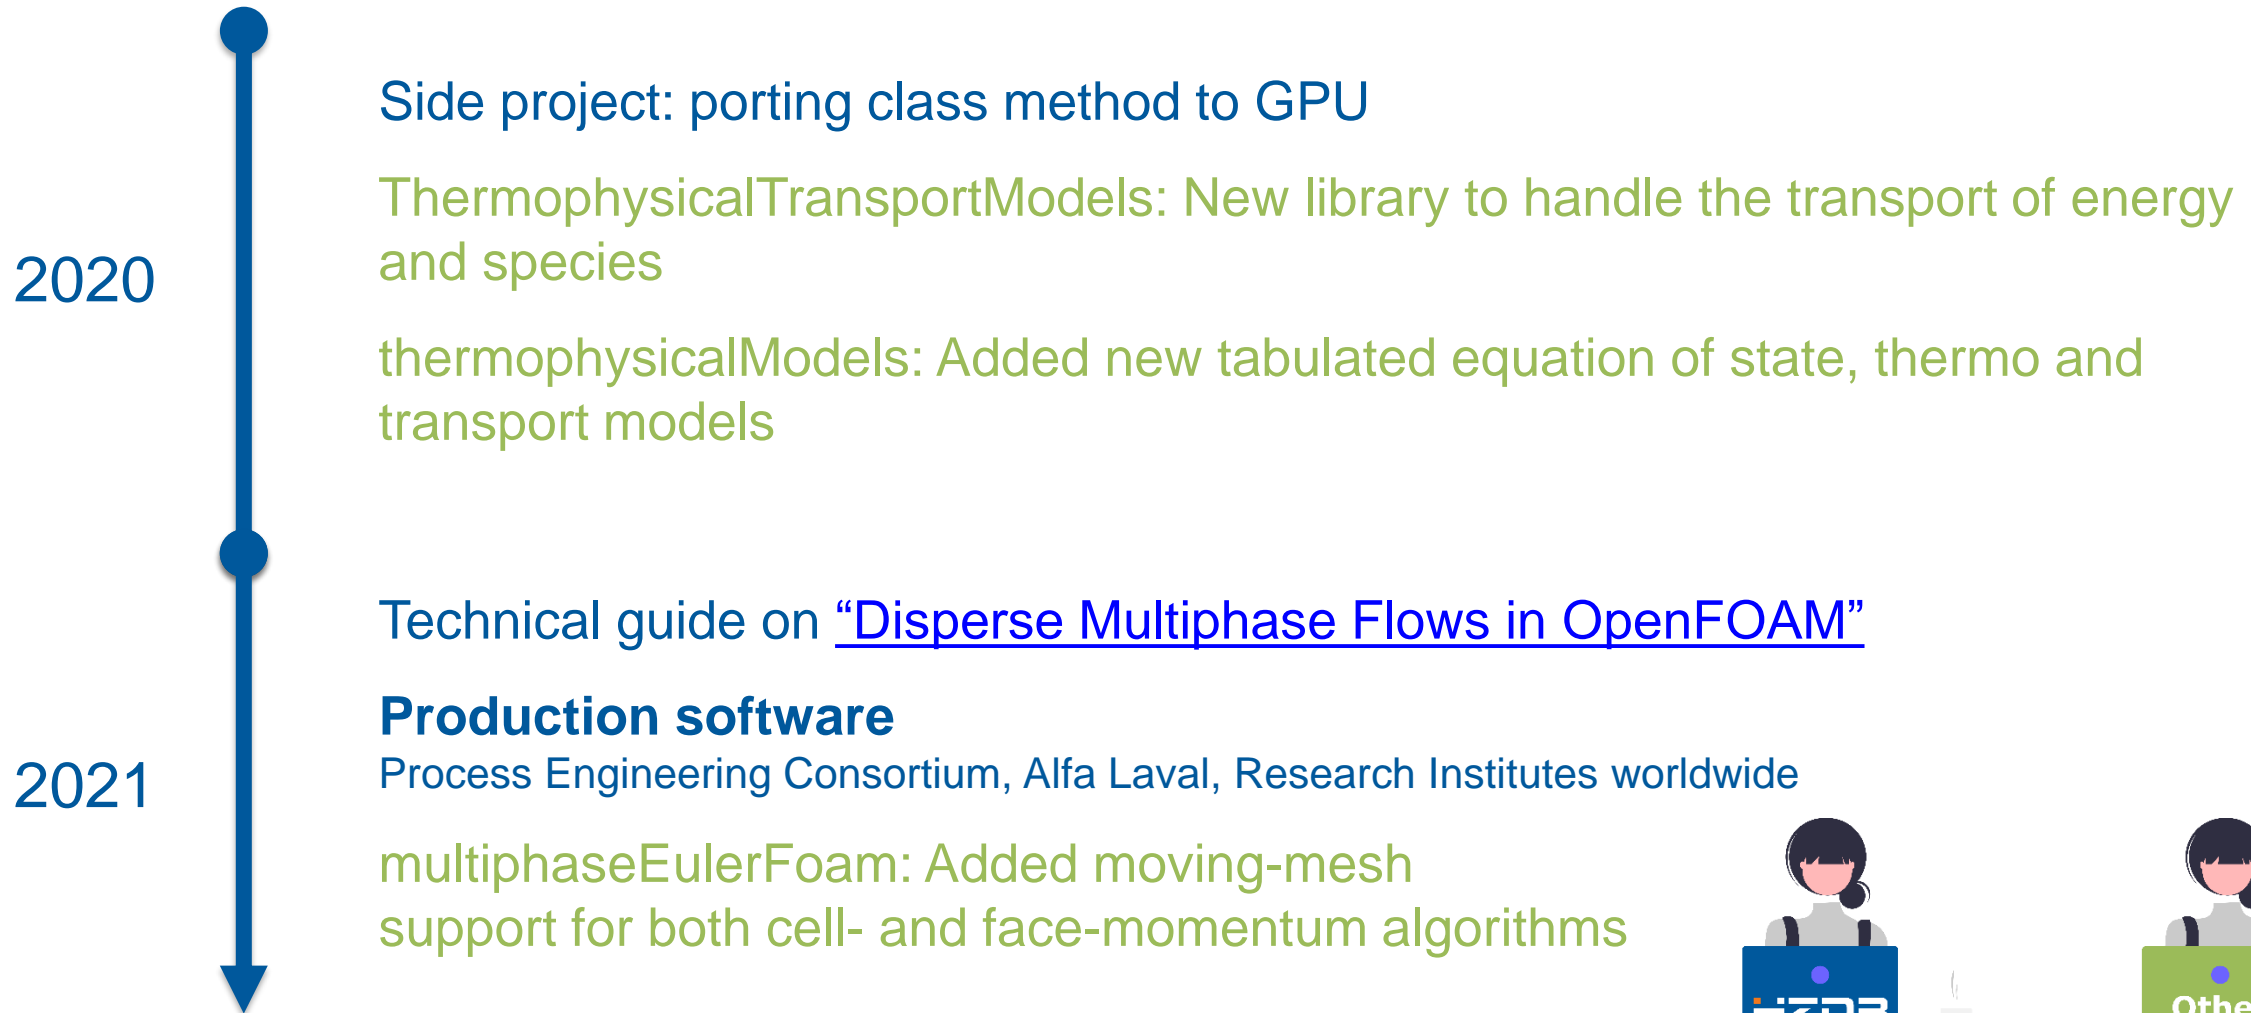

CONTRIBUTION EXAMPLE

CONTRIBUTION EXAMPLE

CONTRIBUTION EXAMPLE

CONTRIBUTION EXAMPLE

2022

Long term commitment of HZDR to support maintenance and new feature development of population balance, e.g., new functionObject "moments"

commit [36c565b9bf5d0f318e0e908c2097fd18f14d1e10](#)

Added solid particle coalescence and breakup model (Adachi et al. ,1994, Kusters, 1991), spherical particle lift force model by Saffman-Mei (1992), and tutorials

commit [36c565b9bf5d0f318e0e908c2097fd18f14d1e10](#)

Non-Conformal Coupled (NCC): Conservative coupling of non-conforming patches

ALTERNATIVE WAY – OPENFOAM_RCS

Gefördert durch:

Bundesministerium
für Umwelt, Naturschutz, nukleare Sicherheit
und Verbraucherschutz

aufgrund eines Beschlusses
des Deutschen Bundestages

OPENFOAM_RCS PROJECT

OPENFOAM VERSIONS IN GERMAN CFD ALLIANCE

Coordinator ► Helmholtz-Zentrum Dresden-Rossendorf
Code ► OpenFOAM Foundation Release

OPENFOAM_RCS PROJECT

MAIN GOALS

- Provide a **sustainable environment** for code and setups, that cannot go into the OpenFOAM development line
 - export control limitations
 - software still a prototype
 - different design philosophy
- Foster **collaborative code** and **case development** based on a reference OpenFOAM installation
- Keep simulation setups and code alive for future projects
- Build up a **validation data base** for nuclear safety applications

OPENFOAM_RCS PROJECT

REPOSITORIES

Software

- GPL license
- Source Code
 - ▶ reference solution functionObject
- Test setups
 - ▶ for physical property evaluation
- Tutorials
 - ▶ HZDR Baseline model

Restricted

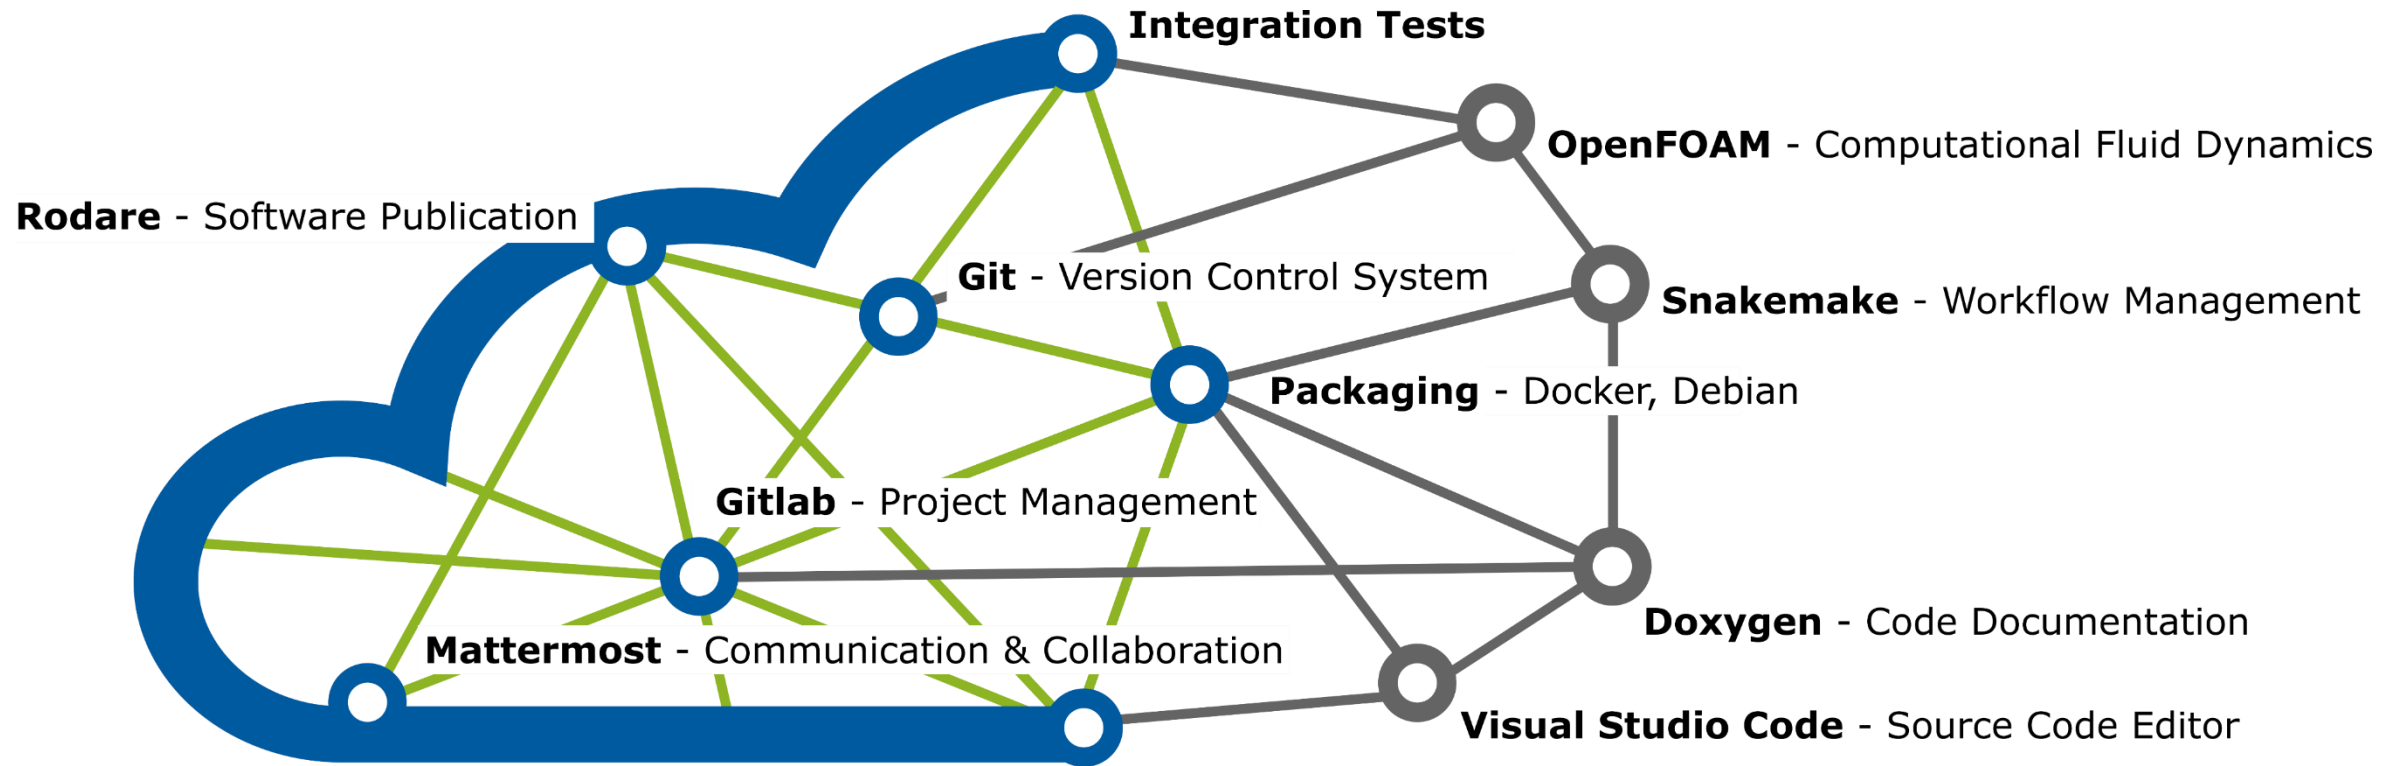

- Proprietary license
- Simulation setups
 - ▶ periodic hill channel
- Validation data base

Gitlab CI/CD

„pipelines“ for functional tests & validation

OPENFOAM_RCS PROJECT

OPENFOAM_RCS PROJECT

PARTNERS

Gesellschaft für Anlagen- und
Reaktorsicherheit gGmbH

Ruhr University Bochum,
Plant Simulation and Safety

University Rostock,
Lehrstuhl für Strömungsmechanik

Pending Partners

- **Technical University of Munich** – Research Neutron Source Heinz Maier-Leibnitz (FRM II)
- **Hochschule Zittau-Görlitz**
- **University of Stuttgart** – Institute of Nuclear Technology and Energy Systems
- **Technical University of Munich** – Chair of Energy Systems
- **VTT Technical Research Centre of Finland Ltd.**

OPENFOAM_RCS PROJECT

RUNNING PROJECTS

Coupling of external **thermophysical properties** library with OpenFOAM

- ▶ GPL License requires coupling via sockets

Highly-automated **workflow management** tool for validation database

- ▶ Snakemake, Python-based, workflow tool from bio-informatics

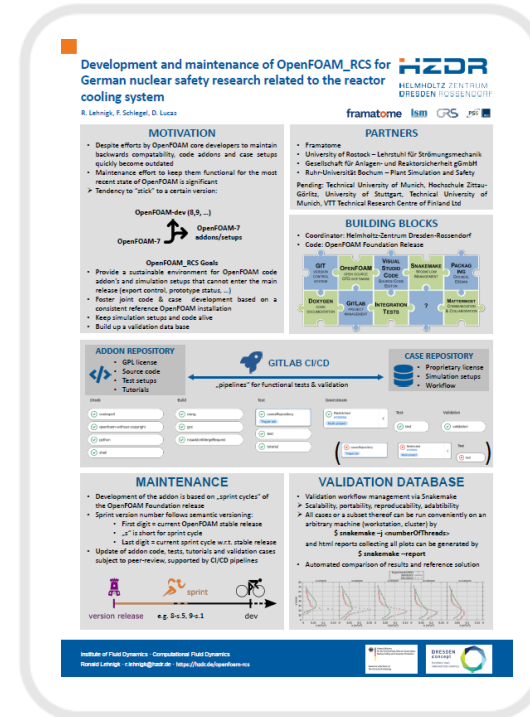

OPENFOAM_RCS PROJECT

POSTER

We are looking forward to further discussions in front of our poster

“Development and maintenance of OpenFOAM_RCS for German nuclear safety research related to the reactor cooling system”

by Lehnigk, R.; Lucas, D. and Schlegel, F.

SUMMARY

- Do not maintain a separate fork, **contribute your developments**
- Contributions to OpenFOAM Foundation are **possible and valuable**
- Contributions have short term costs, but **long term gains**
- Contributions are the most sustainable way

**“A mind is like a parachute.
It doesn't work if it is not open”**

Frank Zappa
