# TOFU

## *TOMOGRAPHY FOR FUSION*

AN OPEN-SOURCE PYTHON LIBRARY FOR SYNTHETIC  
DIAGNOSTICS AND TOMOGRAPHY

D. VEZINET, L. MENDOZA, A. DA ROS, K. OBREJAN, O. CHELLAI

4th IAEA Technical meeting on Fusion Data Processing | D. VEZINET

TOFU

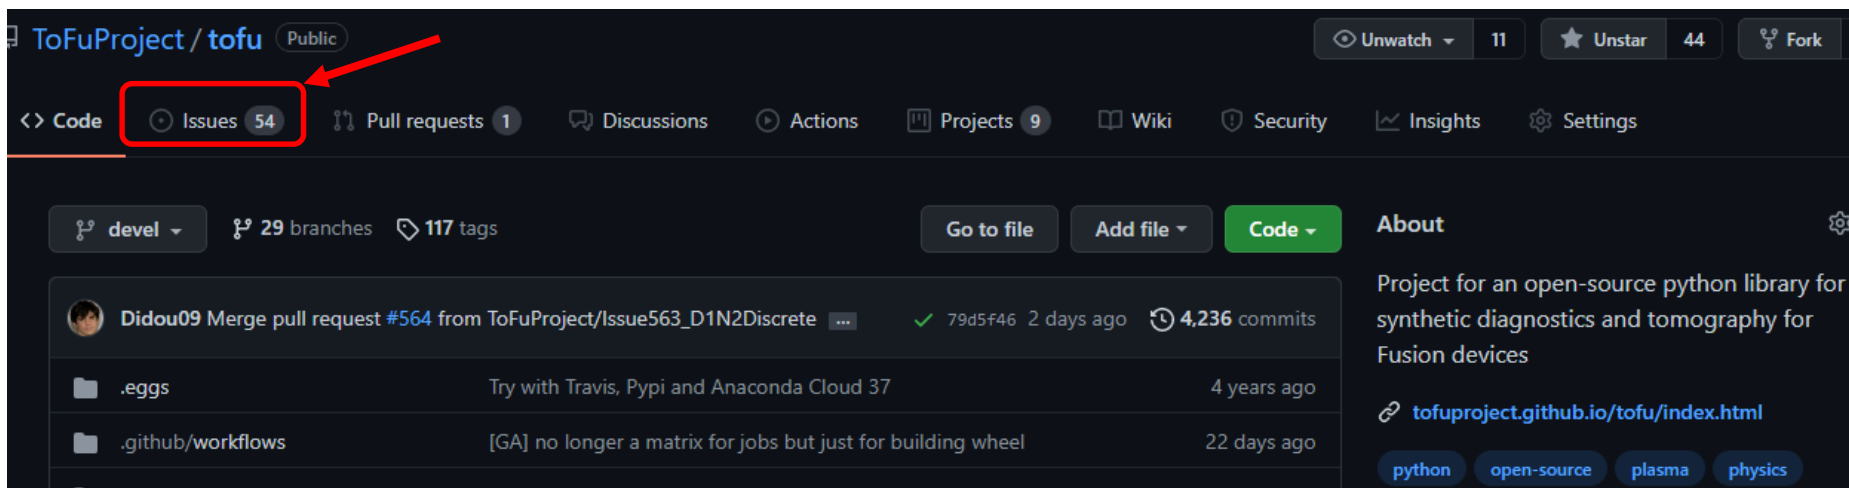

29.11.2021

- ❑ **Why is it relevant for data processing, validation and analysis?**
  - ❑ **Open-source**
  - ❑ **Quality standards**
  
- ❑ **What it does:**
  - ❑ Tokamak and diagnostic modelling and synthetic diagnostics
  - ❑ Inversions (priority of 2021-2022)
  
- ❑ **Perspectives**

- **Open-source** python library (object-oriented)
  - **License:** MIT (permissive, free)
  - **Transparent:** code on Github

The screenshot shows the GitHub repository page for `ToFuProject/tofu`. The repository is public and has 11 watchers, 44 stars, and 9 forks. The navigation bar includes options for Code, Issues (54), Pull requests (1), Discussions, Actions, Projects (9), Wiki, Security, Insights, and Settings. The main content area shows a recent merge pull request by `Didou09` and a list of files including `.eggs` and `.github/workflows`.

- **Open-source** python library (object-oriented)
  - **License:** MIT (permissive)
  - **Transparent:** code on Github

- **Online documentation:**

## Welcome to tofu's documentation!

tofu stands for Tomography for Fusion, it is an IMAS-compatible open-source machine-independent python library with non-open source plugins containing all machine-dependent routines.

It aims at providing the fusion and plasma community with an object-oriented, transparent and documented tool for designing tomography diagnostics, computing synthetic signal (direct problem) as well as tomographic inversions (inverse problem). It gives access to a full 3D description of the diagnostic geometry, thus reducing the impact of geometrical approximations on the direct and, most importantly, on the inverse problem.

tofu is relevant for all diagnostics integrating, in a finite field of view or along a set of lines of sight, a quantity (scalar or vector) for which the plasma can be considered transparent (e.g.: light in the visible, UV, soft and hard X-ray ranges, or electron density for interferometers).

tofu is command-line oriented, for maximum flexibility and scriptability. The absence of a GUI is compensated by built-in one-liners for interactive plots.

tofu is hosted on [github](#).

- **Good practices:**
  - **Version-control:** git
  - **Issue tracker:** github
  - **Pull Requests and code review process:**  
Dedicated branches vs protected master branch
  - **Unit tests:** ~60 % of the code, multiple platforms
  - **Standardized benchmarks:** to quantify speed-ups and detect slow-downs
  - **Automated deployment:** on tags

- **Good practices:**
    - **Version-control:** git
    - **Issue tracker:** github
    - **Pull Requests and code review process:**  
Dedicated branches vs protected master branch
    - **Unit tests:** ~60 % of the code, multiple platforms
    - **Standardized benchmarks:** to quantify speed-ups and detect slow-downs
    - **Automated deployment:** on tags
- ⇒ Contribute to **tracability**, address the **replicability crisis** [1-3]
- ⇒ towards **Open Science** and **FAIR4Fusion**
- ⇒ Natively compatible with **IMAS** and regularly updated to follow **IMAS** standards

[1] M. Baker, Nature 2016, 533 (7604)

[2] Fang et al., PNAS 2012, 109 (42), 17028-17033

[3] Ioannidis JPA (2005) PLoS Med 2(8)

- ❑ **What it does:**
  - ❑ **Tokamak and diagnostic modelling and synthetic diagnostics**
  - ❑ **Inversions (priority of 2021-2022)**
  
- ❑ Perspectives

- 2.5D tokamak representation:

```
In [2]: conf = tf.load_config('ITER')
In [3]: conf.plot()
```

⇒ Feel free to add you tokamak

⇒ See the [video tutorial](#) on how to do it using **Inkscape**

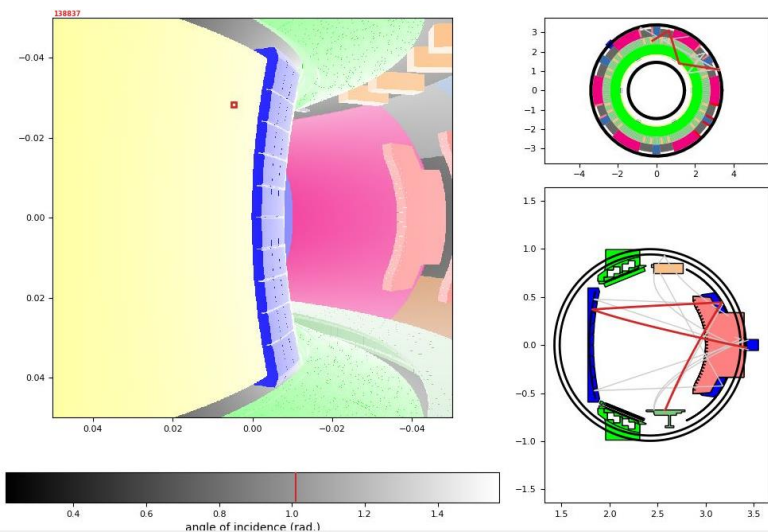

- Fast 1d and 2d camera modelling: (with simple specular reflections)

```
import tofu as tf
conf = tf.load_config('WEST')
cam = tf.geom.utils.create_CamLOS2D(
    pinhole=[3.1, 1.1, 0],
    orientation=[np.pi, np.pi/6, 0],
    focal=0.15,
    sensor_size=0.1,
    sensor_nb=800,
    config=conf,
    Name='test',
    Diag='diag')

# import
# load tokamak geometry (configuration)
# create pinhole camera
```

2d camera

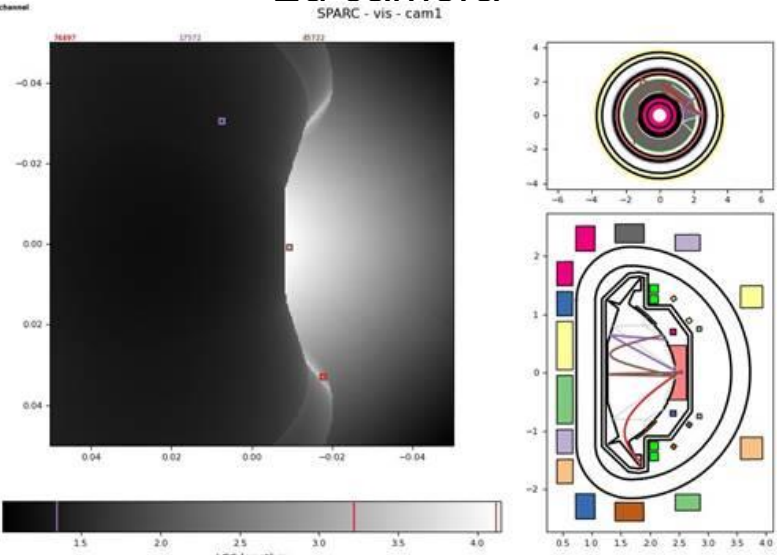

1d camera

- Fast 1d and 2d camera modelling: (with simple specular reflections)

```
import tofu as tf
conf = tf.load_config('WEST')
cam = tf.geom.utils.create_CamLOS2D(
    pinhole=[3.1, 1.1, 0],
    orientation=[np.pi, np.pi/6, 0],
    focal=0.15,
    sensor_size=0.1,
    sensor_nb=800,
    config=conf,
    Name='test',
    Diag='diag')
# import
# load tokamak geometry (configuration)
# create pinhole camera
```

2d camera

Provides tools for fast LOS-integration for synthetic diagnostics

1d camera

=> 4 types of **bsplines**

**Triangular meshes**  
(ongoing)

Deg = 0

Deg = 1

(low priority)

Introduce dependency on **equilibrium**  
=> Possible source of systematic error

(high priority)  
(early 2022?)

Ex: radial/poloidal bsplines

## Diagnostic geometry

**Geometry / transfer matrix**

$$G_{ij} = \iiint_{FOVi} \iint_{\Omega_i} b_j d\Omega dV$$

## Plasma meshing (axisymmetric)

[1] D. Vezinet et al, Nuc. Fus, 56, 2016

### 2 Choices:

- On which basis functions to discretize?
- **Which approach to compute the integral?**

## Diagnostic geometry

[1] D. Vezinet et al, Nuc. Fus, 56, 2016

$$G_{ij} = \iiint_{FOVi} \iint_{\Omega_i} b_j d\Omega dV$$

Fast  
Low accuracy  
Assumes isotropy

Slow  
High accuracy

$$G_{ij} = E_i \int_{LOS_i} b_j \Omega dV d\Omega$$

LOS

$$G_{ij} = \iiint_{FOVi} \iint_{\Omega_i} b_j \Omega d\Omega dV \quad \text{VOS}$$

$$G_{ij} = \int_{Rays_i} b_j \Omega dV d\Omega \quad \text{Ray tracing}$$

## Diagnostic geometry

[1] D. Vezinet et al, Nuc. Fus, 56, 2016

$$G_{ij} = \iiint_{FOVi} \iint_{\Omega_i} b_j d\Omega dV$$

Fast  
Low accuracy  
Assumes isotropy

Slow  
High accuracy

$$G_{ij} = E_i \int_{LOS_i} b_j \Omega dV d\Omega$$

LOS

$$G_{ij} = \iiint_{FOVi} \iint_{\Omega_i} b_j \Omega d\Omega dV \text{ VOS}$$

$$G_{ij} = \int_{Rays_i} b_j \Omega dV d\Omega \quad \text{Ray tracing}$$

tomotok

Coming (early 2022):

- Anisotropic smoothing

**Tomotok:** interoperability with another tomography library

- Open source (EUPL licence): <https://github.com/tomotok>
- Focused on discretization methods (input types numpy and scipy only)
- Regularised - Minimum Fisher Regularisation(MFR), Linear Algebraic Methods
- Not regularised – Biorthogonal basis decomposition
- Geometry matrix computation using single line of sight approximation
- Simple forward modelling framework
- Graphical user interface for visualization and post processing

Example results of regularized methods used on a phantom model (SVD and GEV are linear algebraic methods)

J. Svoboda, J.Cavalier, et al., “Tomotok: python package for tokamak plasma tomography”, 4<sup>th</sup> ECPD conference, J. Inst. (Accepted Oct 2021, future DOI <https://doi.org/10.1088/1748-0221/00/00/P00921>)

Biorthogonal basis decomposition used on experimental data of COMPASS tokamak  
(unregularized method - requires more lines of sights than reconstruction nodes)

#16693 - Frame 1761

J. Svoboda, J.Cavalier, et al., "Tomotok: python package for tokamak plasma tomography", 4<sup>th</sup> ECPD conference, J. Inst.  
(Accepted Oct 2021, future DOI <https://doi.org/10.1088/1748-0221/00/00/P00921>)

$$\|\nabla\epsilon\|^2$$

$$\|\Delta\epsilon\|^2$$

$$\|\nabla\epsilon\|^2$$

$$\|\Delta\epsilon\|^2$$

- ❑ Why is it relevant for data processing, validation and analysis?
  - ❑ Open-source
  - ❑ Quality standards
  
- ❑ What it does:
  - ❑ Tokamak and diagnostic modelling and synthetic diagnostics
  - ❑ Inversions (priority of 2021-2022)
  
- ❑ **Perspectives**

All the above relies on implicit assumptions (possible sources of **systematic errors**)

- Is the **geometry of the diagnostic** properly modelled / known ?

How many diagnostics underwent a proper in-situ metrology campaign?

Which level of accuracy?

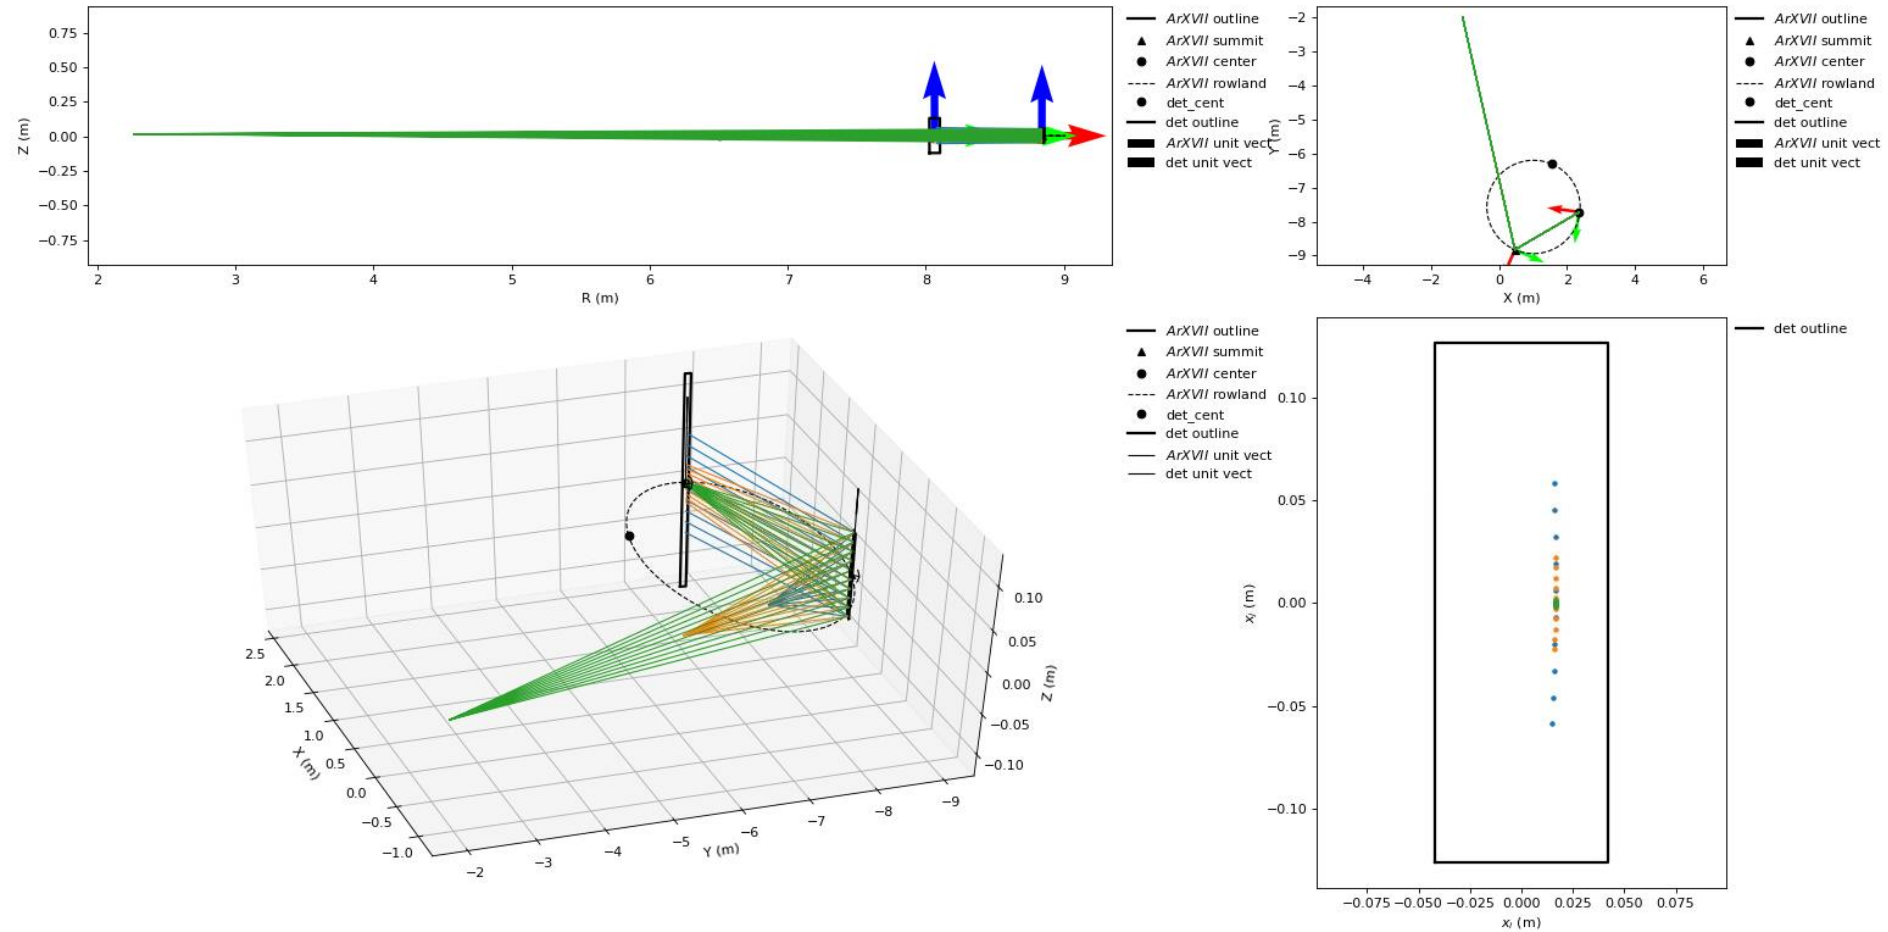

**A fraction of a degree in camera orientation can result in significant worse / better inversion quality !**

=> ideally, the geometry should be part of the unknowns (iterated over)

### X-Ray spectrometers

### Geometry modelling & ray-tracing + inversions

(ongoing)

**Philipps-Tikhonov regularization** (ongoing)

**Gaussian process Regressions** (next main approach to be implemented)

Particularly interesting for error bars and bayesian approach  
Possible interoperability with existing libraries?

**Neural networks and AI for fast reconstructions**

Questions on the training set!
