

**Dr. Urszula Gryczka** is an assistant professor at the Institute of Nuclear Chemistry and Technology, Warsaw, Poland. She graduated in Chemical and Process Engineering from Warsaw University of Technology and completed PhD in radiation chemistry. Her scientific interest in the development of the use of electron beams is focused on food irradiation, microbial decontamination and sterilisation, polymers modification and environmental applications. She is experienced in controlling the electron beam irradiation process parameters and dose measurements and also in the normalisation aspect of radiation processing as an internal auditor, member of ASTM and representative of the INCT in the Polish Normalisation Committee.
