

Dr. Nicholas van der Meulen (PSI, Switzerland) hails from Cape Town, South Africa, and received his education there. He obtained his PhD in Chemistry from Stellenbosch University in 2008, with his thesis work concentrating on the production of various radionuclides, predominantly for medical purposes. He worked as a research chemist at iThemba Laboratory for Accelerator Based Sciences for 17 years, before taking up the position of Group Leader: Radionuclide Development at Paul Scherrer Institute in 2013. He is actively involved in the development of exotic radionuclides, as well as the supervision of students in this field.
