

Maria-Elisso Stamati (*University of Ioannina, Greece*)

I started my studies in the Department of physics in the University of Ioannina in Greece. During the first years of my undergraduate studies, I developed an interest for experimental nuclear physics and performed a traineeship in KULeuven in Belgium. I continued my studies with a Master's degree in experimental physics, with my thesis being focused on the characterisation of a HPGe detector and the feasibility study of neutron inelastic scattering measurements through gamma-spectroscopy in CERN's n_TOF facility. Now I'm a PhD candidate of the University of Ioannina and a doctoral student of CERN, focusing on nuclear astrophysics.
