## A suggested vision for building training capacities in the United Arab Emirates qualified to spread the culture of peaceful energy among Arabic speakers

The current study aims to build training capacities from the people of the United Arab Emirates who have the full capacity and sufficient qualification to spread the culture of peaceful energy throughout the Arab world and educate all Arabic speakers. By defining the knowledge and skills required to perform the role assigned to them in spreading that culture and raising awareness of its importance and danger, and how the Western world is moving strongly towards renewable and green energy that does not leave a negative impact on the environment, as it is of course clean, peaceful energy.

All of this is directed towards the peaceful uses of energy and thus achieving the concept of sustainable energy and safe energy for the benefit of those working in the field, specialists and officials. It is one of the most important elements for achieving sustainable economic growth.

The descriptive analytical approach will be followed in analyzing the skills, knowledge and performances that must be available in the capabilities that we are working on rehabilitating. As well as the constructivist approach to building the proposed scenario for building, developing and training those human capacities so that they are at a high level of training that can actually spread the culture of peaceful energy among Arabic speakers.

A tool for the study will be built, which is a questionnaire directed to faculty members, experts and Arab specialists to ask them about the most important knowledge and skills that these human capabilities must possess, and how we can train them in them in a scientifically correct way to ensure their correct acquisition of those knowledge and skills. The study population consists of Arab faculty members, experts and specialists, and an appropriate random sample will be selected.

The researcher expects, at the end of his research, that he will present a proposed vision that includes all the required elements in selecting, training and qualifying the human capabilities of the people of the Arab Emirates and qualifying them appropriately so that they can spread the culture of peaceful energy in all parts of the Arab world, which is very dangerous due to the lack or perhaps the scarcity of qualified capabilities in this field.

Keywords: suggested vision, capacity building, peaceful energy, spreading the culture of peaceful energy, clean energy, sustainability, safe energy, economic growth.
