□ Motivation

- Traditional Installation
- Virtual Installation
- Virtual Installation System V1
- Discussion

□ System Architecture

□ Function List

□ System Implementation

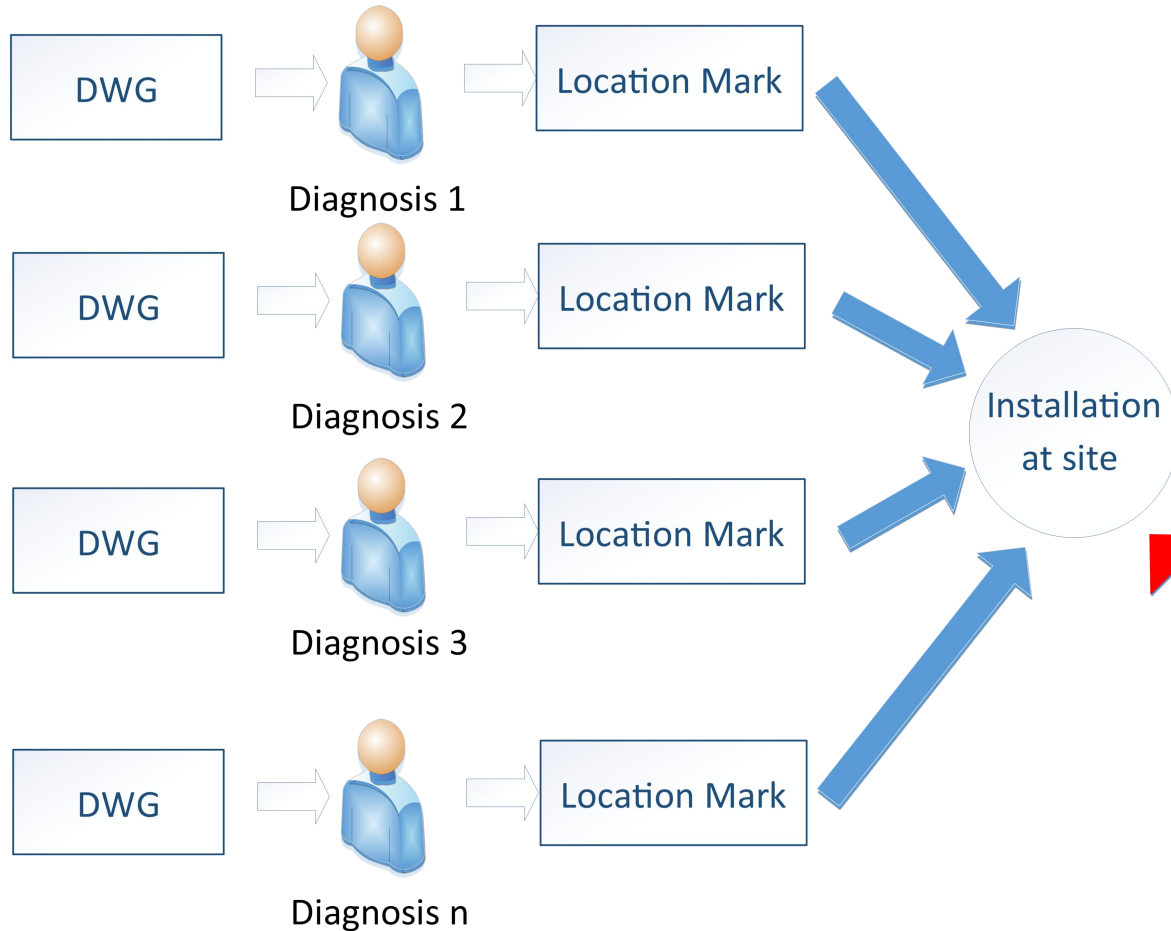

- 3D Printing
- Binocular Vision Camera
- Point Cloud Generation
- Auxiliary Measurement Tool

□ Summary

Traditional Installation

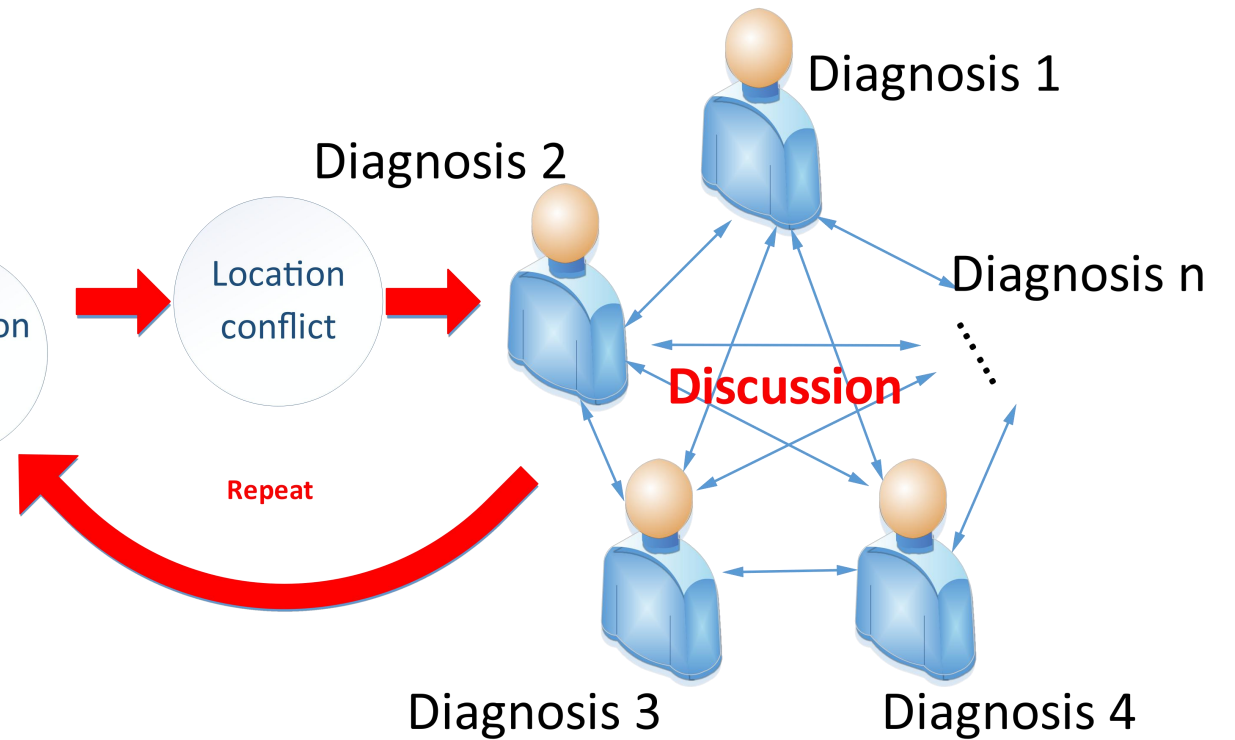

Dispersed Information

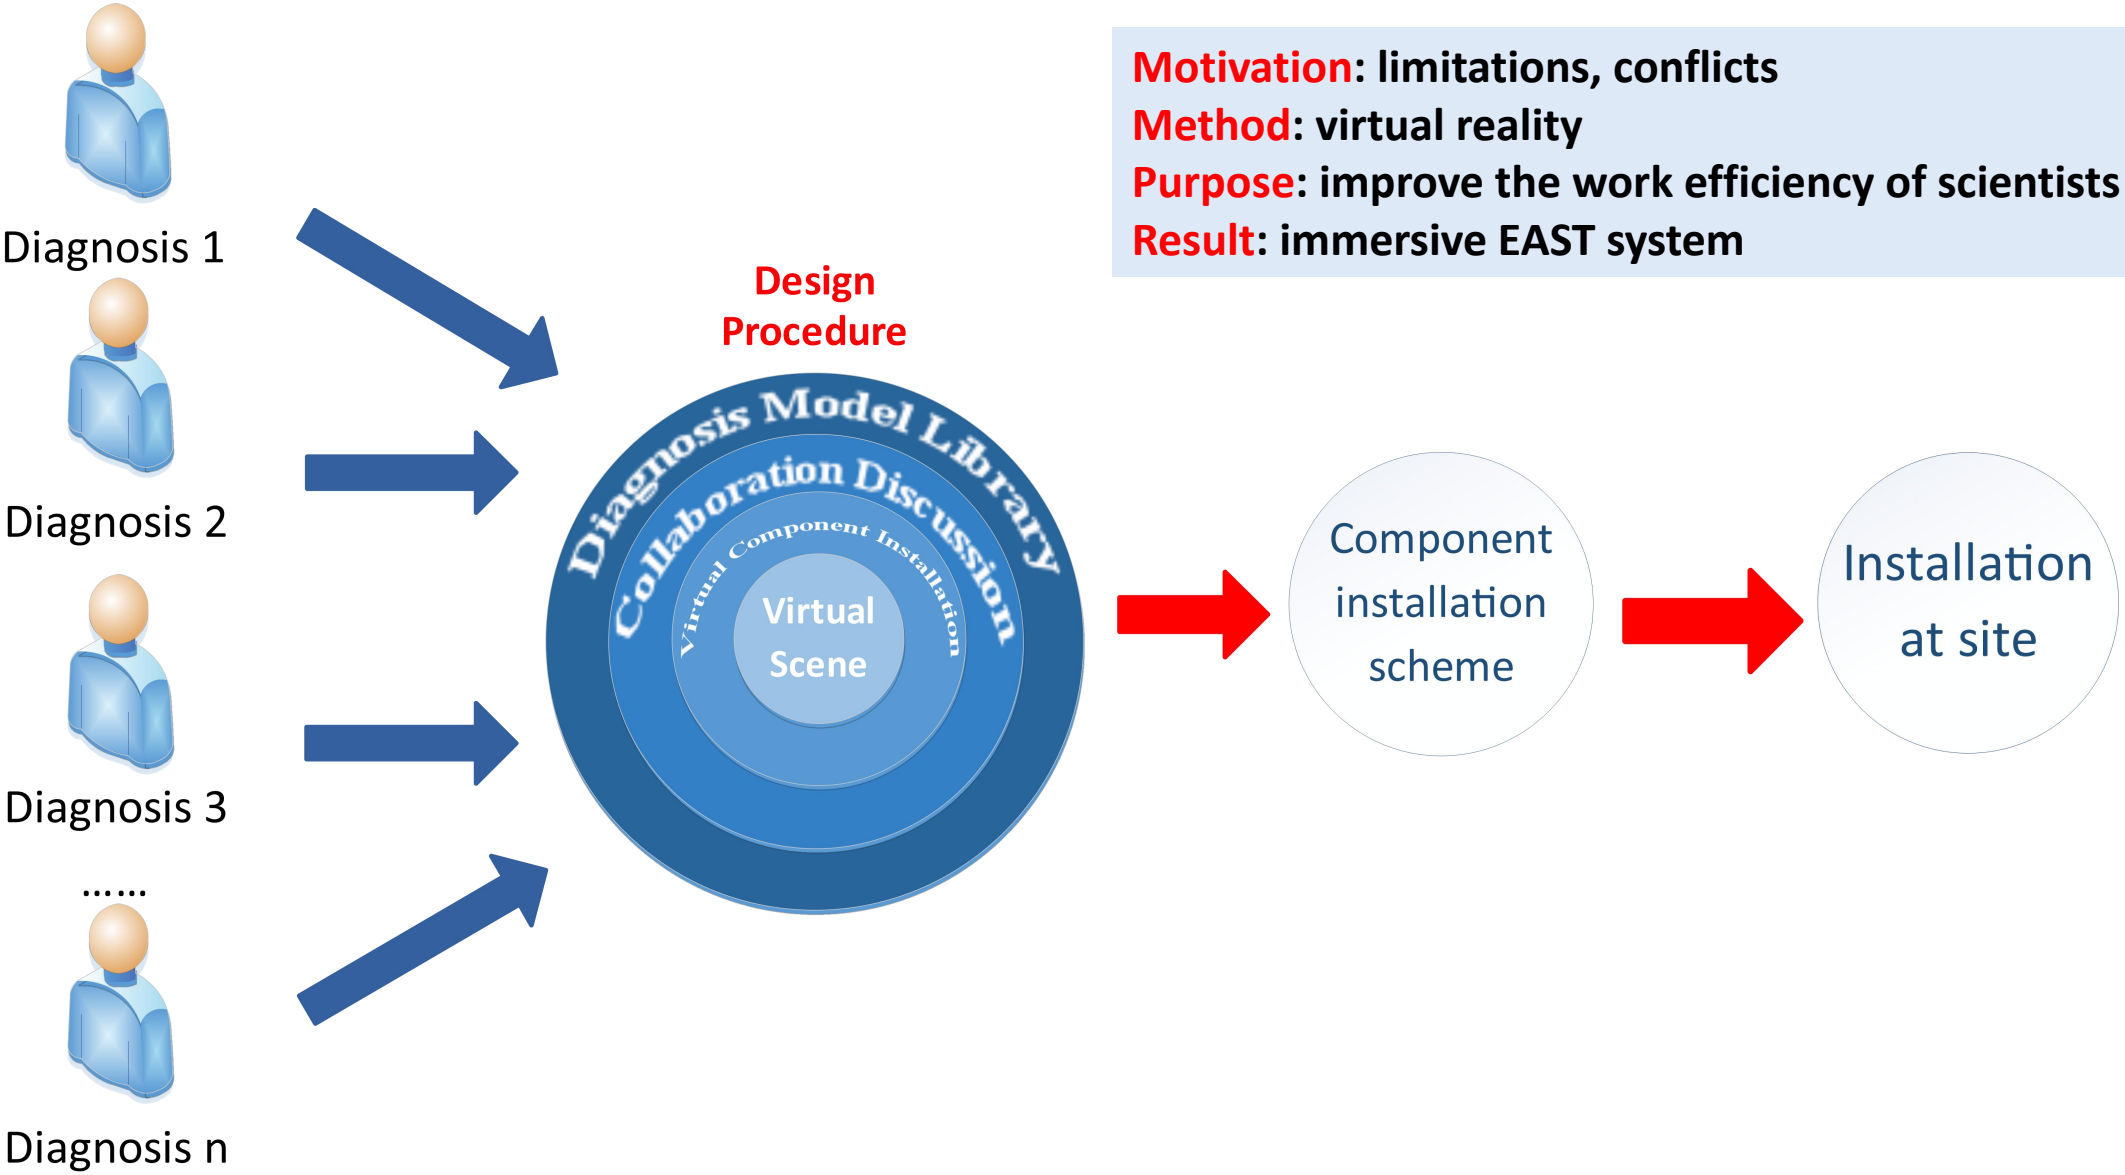

Location Conflict

Repetitive Work

Virtual Installation

Virtual Installation System V1

EAST host model

EAST vacuum model reconstruction

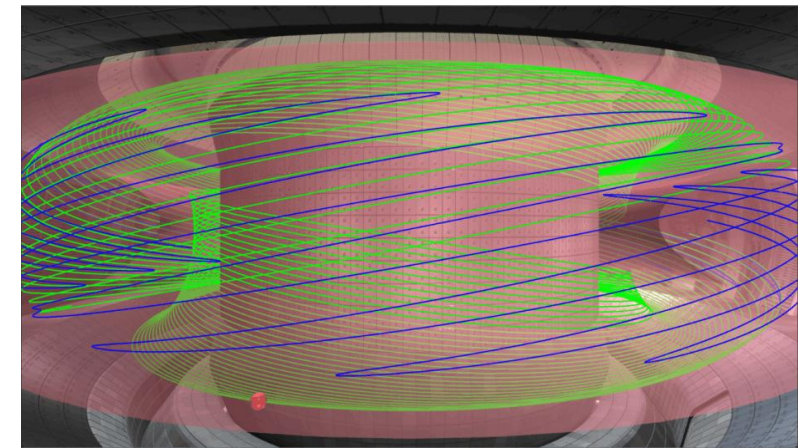

Window map

Magnetic probe virtual installation

Installation in realistic scene

Data visualization

- **Virtual installation system plays a crucial role in:**
 - **Gathering dispersed information**
 - **Visualizing the EAST device**
 - **Understanding complex data**
 - **Communicating installation scheme and location conflict effectively**
 - **Simulating real installation**
- **Some problems that need to be improved:**
 - **Model reconstruction is complicated and inefficient**
 - **Detailed model is not accurate enough**
 - **Collision detection lacks of pre-warning**
 - **Application functions need to be extended**

□ Motivation

- Traditional Installation
- Virtual Installation
- Virtual Installation System V1
- Discussion

□ System Architecture

□ Function List

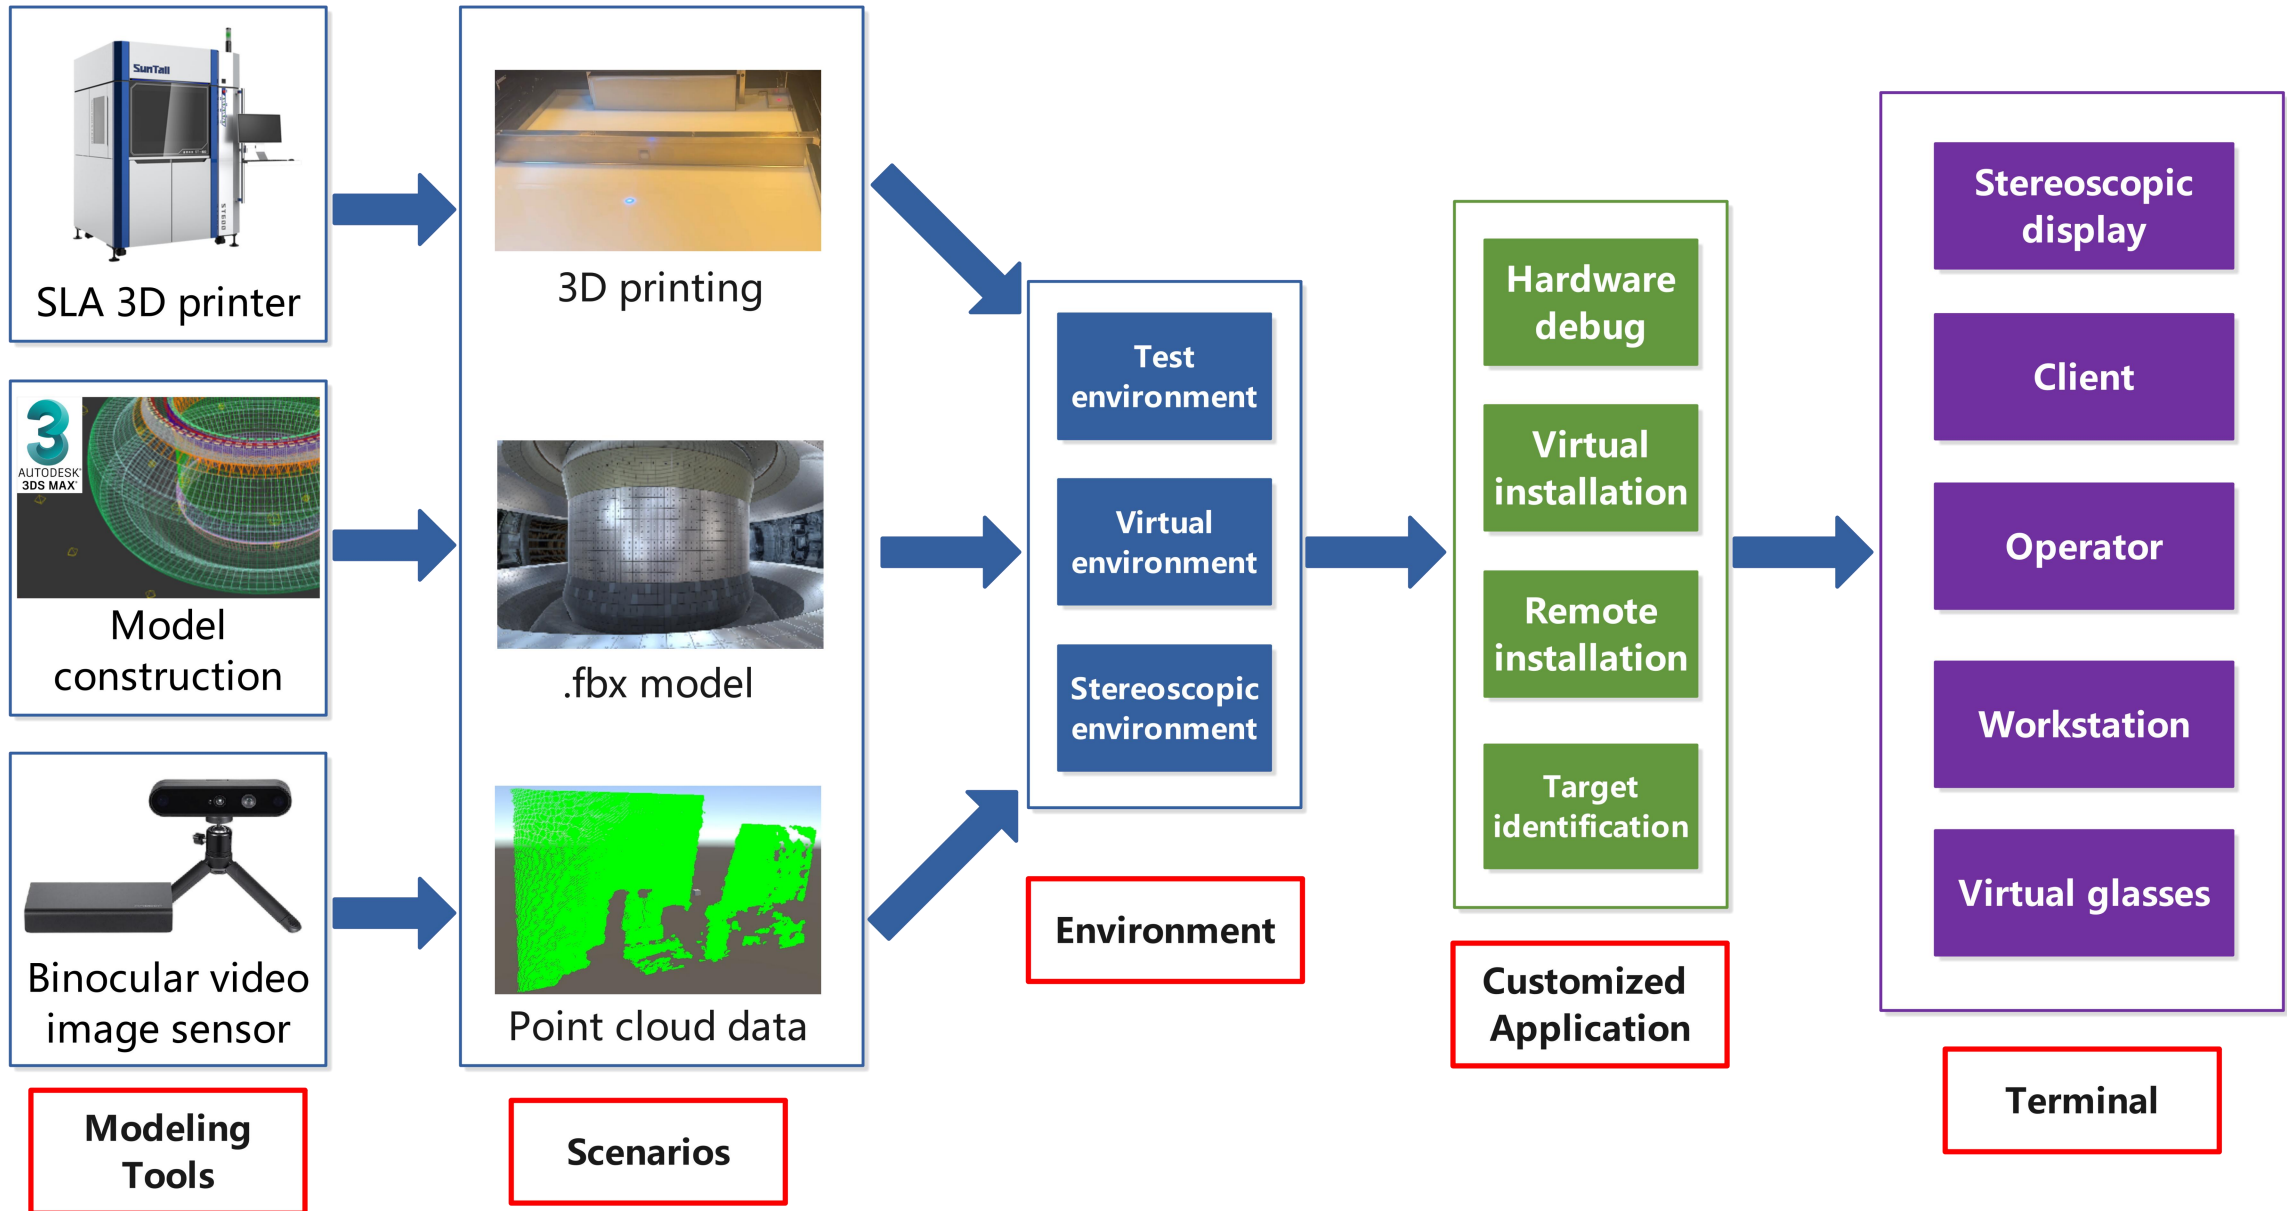

□ System Implementation

- 3D Printing
- Binocular Vision Camera
- Point Cloud Generation
- Auxiliary Measurement Tool

□ Summary

- Point Cloud Generation
- Auxiliary Measurement Tool

□ Summary

SLA(Stereo Lithography Appearance)

- less variety of materials
- high equipment operation and maintenance costs
- high level of automation
- smooth surface
- fine feature details

Parameters:

- Maximum operating range: **0.4-20m+**
- Global shutter for **RGB and IR cameras**
- Wide Field of View at 91° horizontal and 66° vertical
- Deep technology: Structured light enhanced binocular
- Depth image resolution: 1280 x 800
- **OrbbecViewer**: View depth streams, visualize point clouds, record and play back data streams, configure camera Settings.
- **Orbbec SDK**: Include code that access the camera into application, such as color streams, depth streams, point clouds, alignment, recording.

Orbbec Gemini 2XL

Use the SDK to include code that access the camera into your application.

C/C++

Android

ROS

OpenNI2

Kinect

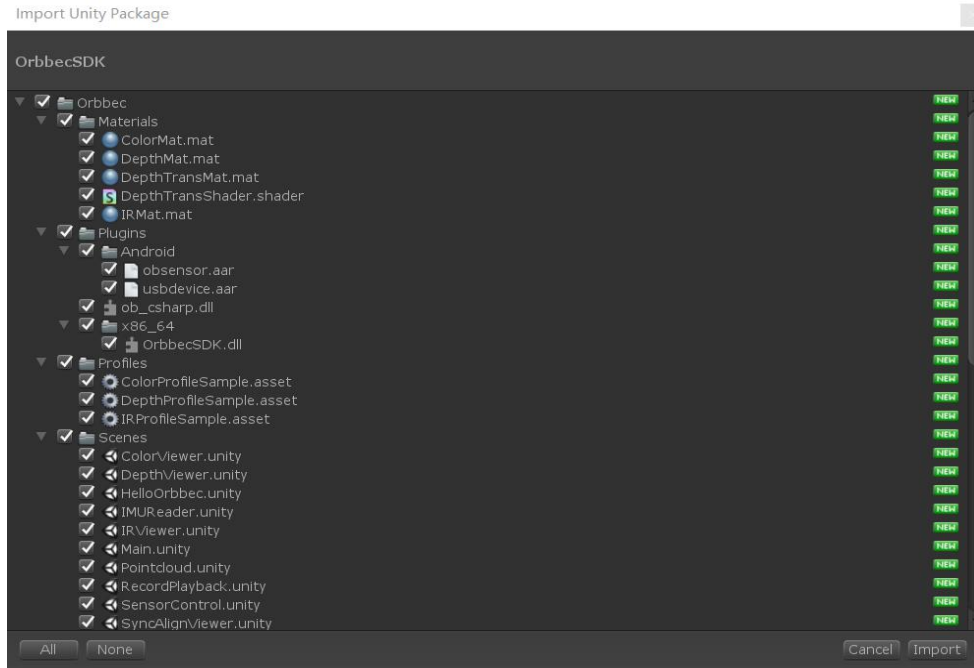

Python

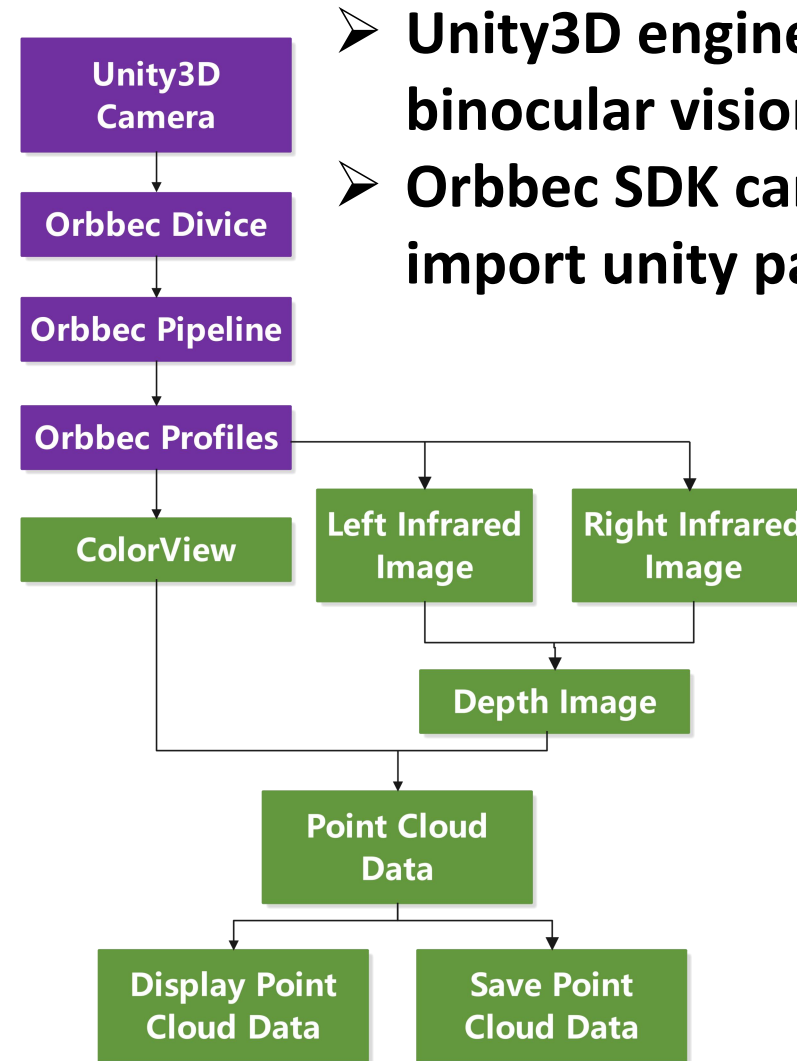

Unity

Point Cloud Generation

Import unity package

- **Unity3D engine is used to realize the binocular vision system.**
- **Orbbec SDK can support users to import unity package.**

Auxiliary Measurement Tool

- **One surface measurement:** measure the distance between the plane and the camera plane.
- **Two surfaces measurement:** measure the horizontal or vertical distance of two points.
- **Locating point measurement:** measure the distance between any two points, and determine the precise value of the critical space.

One surface measurement

Two surfaces measurement

Locating point measurement

□ Motivation

- Traditional Installation
- Virtual Installation
- Virtual Installation System V1
- Discussion

□ System Architecture

□ Function List

□ System Implementation

- 3D Printing
- Binocular Vision Camera
- Point Cloud Generation
- Auxiliary Measurement Tool

□ Summary

- Model reconstruction and component installation are realized in the previous version.
- 3D printing experimental environment is completed.
- Binocular vision camera is deployed and software environment is configured by importing SDK into Unity3D and rewriting code.
- EAST point cloud data is generated, the performance of point cloud will be improved by multi-angle shooting and stitching.
- Various distance calculation methods are implemented.
- Virtual installation test code is completed and proves the method is available.

Thank you !
