Nuclear Physics

Atomic Masses & Nuclear Physics

- ⇒ Binding energy
 - mass models
 - shell structure

- ⇒ Correlations
 - pairing
 - p-n

- ⇒ The limits of existence
 - drip lines

- ⇒ Nuclear astrophysics
 - nucleosynthesis pathways & scenarios

- essential to Nuclear Structure research & Data Evaluation
 - ⇒ widely used in other areas of physics, chemistry, metrology and applications ...

Atomic Masses & Nuclear Structure

PHYSICAL REVIEW C **109**, 044311 (2024)

Nucleonic shells and nuclear masses

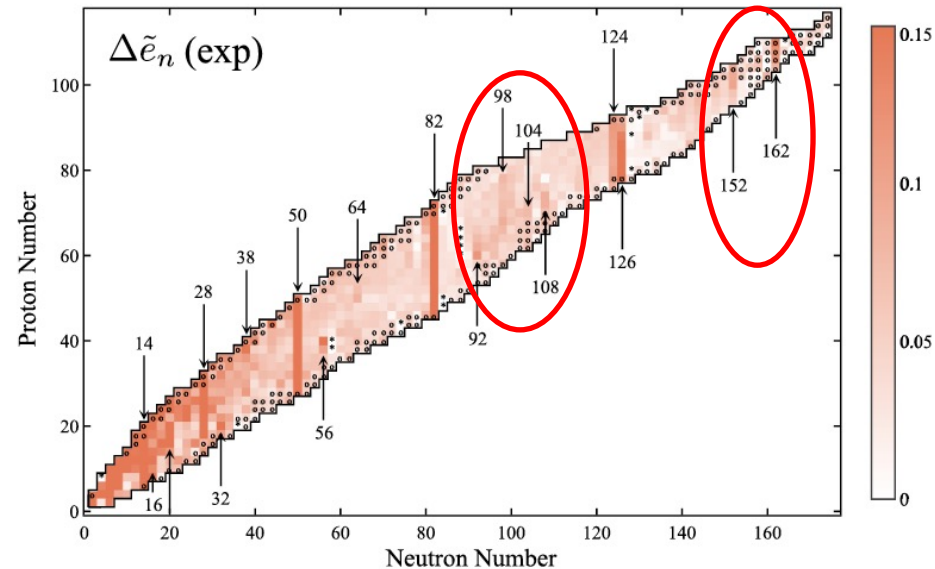

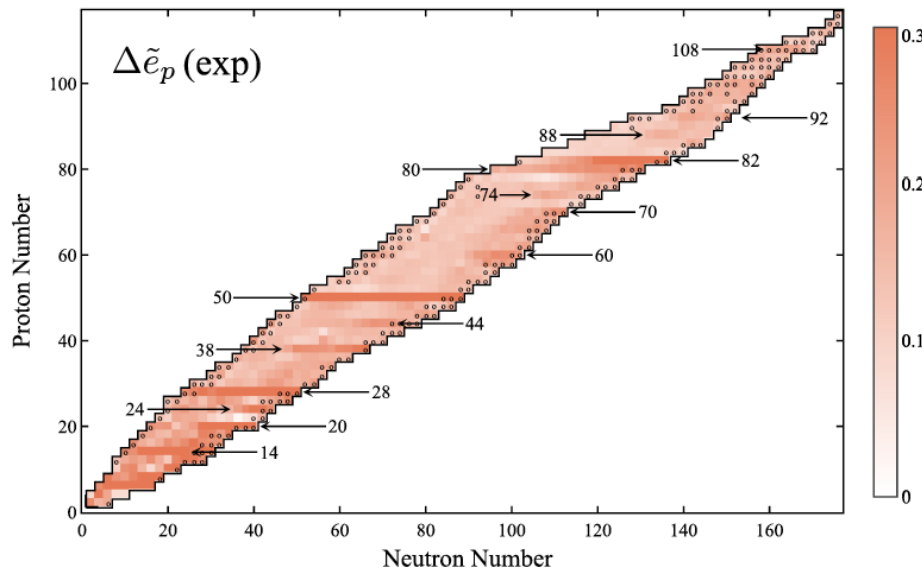

Landon Buskirk^{1,2}, Kyle Godbey¹, Witold Nazarewicz^{1,2} and Wojciech Satuła³

¹Facility for Rare Isotope Beams, Michigan State University, East Lansing, Michigan 48824, USA

²Department of Physics and Astronomy, Michigan State University, East Lansing, Michigan 48824, USA

³Institute of Theoretical Physics, Faculty of Physics, University of Warsaw, PL-02093 Warsaw, Poland

⇒ sensitivity to single-particle energies near the Fermi level

AME & NUBASE

- AME & NUBASE provide the recommended values for atomic masses, various decay and reaction Q values & other basic properties for all known nuclei

- ⇒ input to ENSDF, ENDF, RIPL ...
- ⇒ applications of nuclear science
MCNP, GEANT4, OpenMC ...

- historically contributed by A. Wapstra & G. Audi
- since 2008 - collaboration between experts from China, Europe, Japan & US

latest tables were published in March 2021
*** AME2020 & NUBASE2020 ***

NORTH AMERICA TOP CITED PAPER AWARD

2023

Physics

This certificate recognizes

The NUBASE2020 evaluation of nuclear physics properties

as one of the top 1% most-cited papers in IOP Publishing's
portfolio of journals from 2020-2022

Congratulations on this notable achievement.
Thank you for choosing to publish your work with us.

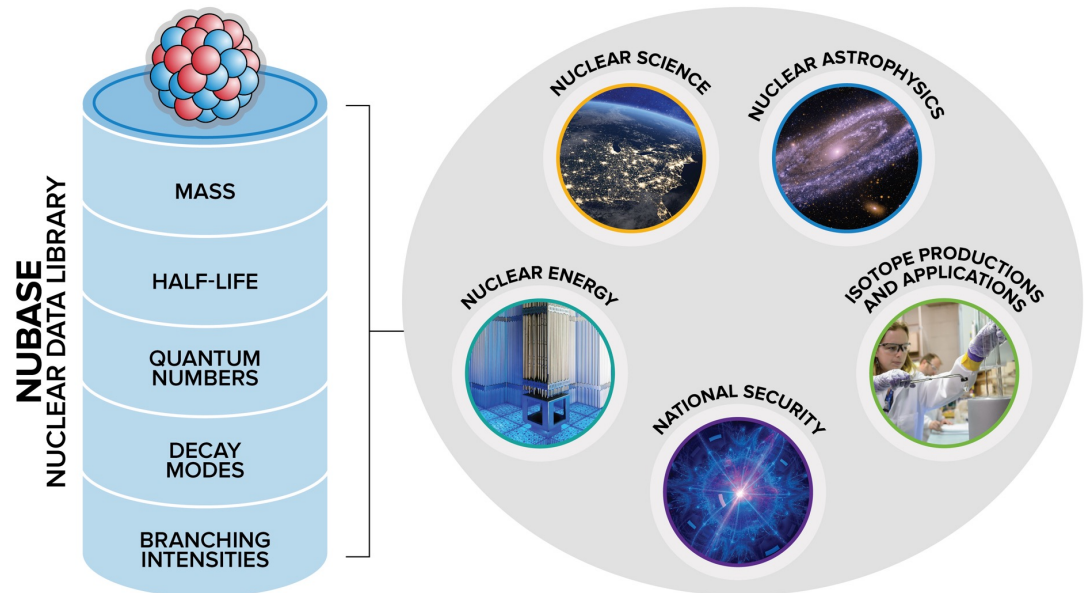

F.G. Kondev, M. Wang (王猛), W.J. Huang (黄文嘉), S. Naimi and G. Audi (欧乔治)

The NUBASE2020 evaluation of nuclear physics properties^{*}

To cite this article: F.G. Kondev *et al* 2021 *Chinese Phys. C* 45 030001

The current NUBASE nuclear data library contains recommended values and uncertainties for nuclear physics characteristics of all nuclei in their ground and excited isomeric states.

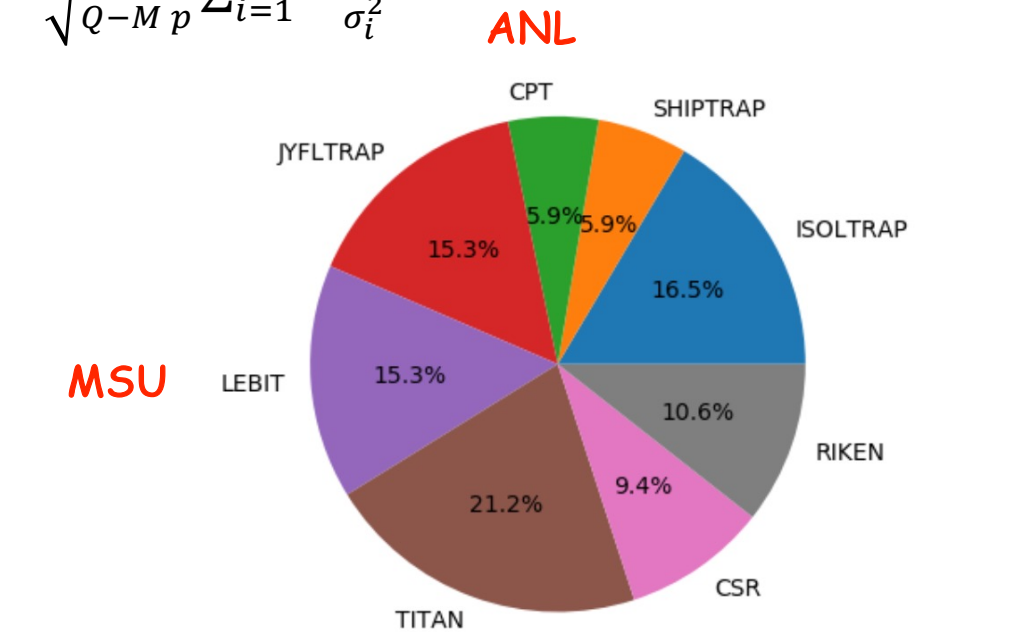

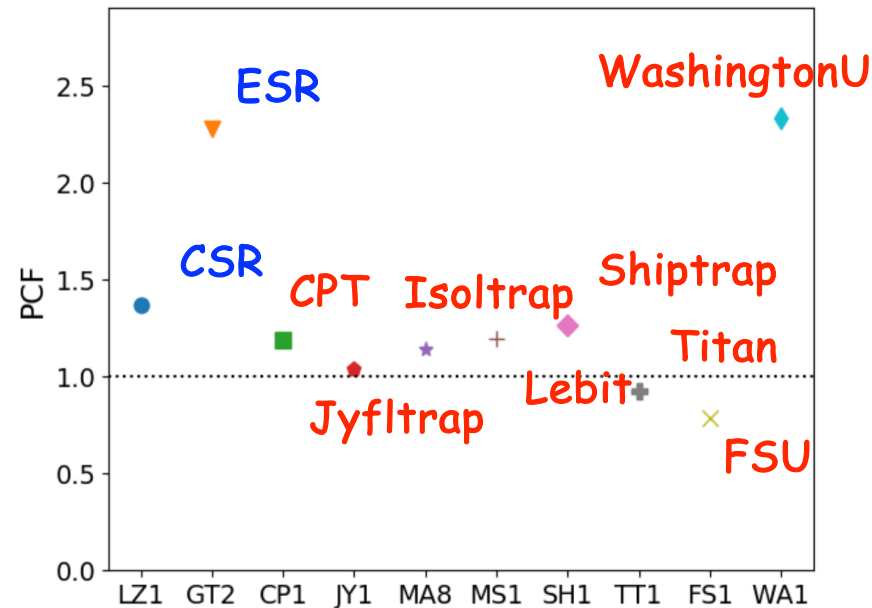

Which Data Are Considered

⇒ Direct (mass spectrometry) and Indirect (reactions and decays) Data produced worldwide

- TOF & MR-TOF, Storage Rings & Penning Traps
- Decay Energies in β^- , β^+ , α and p decays - far from stability

⇒ critically evaluate all experimental data & combine the accepted values using the least-squares fit approach → mass values & covariances for all known nuclei

Partial Consistency Factor (PCF): $\chi^p = \sqrt{\frac{Q}{Q-M} \frac{1}{p} \sum_{i=1}^p \frac{(q_i - \bar{q})^2}{\sigma_i^2}}$

published direct mass data since AME2016

Connection to Nuclear Structure

- Beware of isomers - do we have the right relations?

J. Van Schelt et al., PRL111 (2013) 061102

F.G. Kondev et al., CPC 45 (2021) 030001

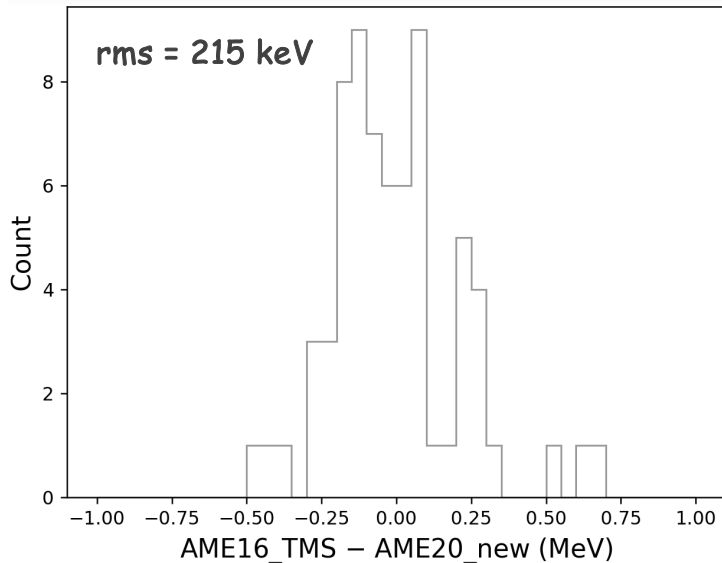

NUBASE evaluation of basic nuclear properties

- ⇒ masses (E_x) for isomers and their method of deduction - integral part of AME
- ⇒ $T_{1/2}$, $J\pi$, decay modes and BR for both ground states (3558) and isomers (1983)
- ⇒ properties of 205 Isobar Analog States

AME extrapolations

- ⇒ using an empirical approach by assuming that the Trend of the Mass Surface (TMS) is smooth
- TMS extrapolated mass values for a limited number of unknown nuclei
 - replace “irregular” experimental masses by TMS extrapolated values - 77 cases in AME2020

accuracy of the AME extrapolation

TMS in AME2016, BUT exp in AME2020

not always justified ... new physics?

build up of deformation around N=40

AME extrapolations - cont.

Bayesian Framework for Mining of Evaluated Nuclear Mass Data

MICHIGAN STATE UNIVERSITY | Argonne NATIONAL LABORATORY | SKIDMORE COLLEGE
