# IAEA

# IAEA work on Research Reactors: Programmatic Structure

Major Programme 1 – Nuclear Power, Fuel Cycle and Nuclear Science

Programme 1.2 – Nuclear Fuel Cycle and Waste Technology

## **Sub-programme 1.2.6 – Research Reactors**

- **Access to research reactors, capacity building and infrastructure development**
- **Research reactor fuel cycle**
- **Research reactors operation, performance and upgrades**

Programme 1.4 – Nuclear Science

## **Sub-programme 1.4.2 – Research and applications with accelerators and neutron sources**

- **Accelerators and neutron source applications**
- **Enhancing research with accelerators and neutrons**

Major Programme 3 – Nuclear Safety and Security

Programme 3.2 – Safety of Nuclear Installations

## **Sub-programme 3.2.5 – Safety of Research Reactor and Fuel Cycle Facilities**

- **Safety of research reactors**

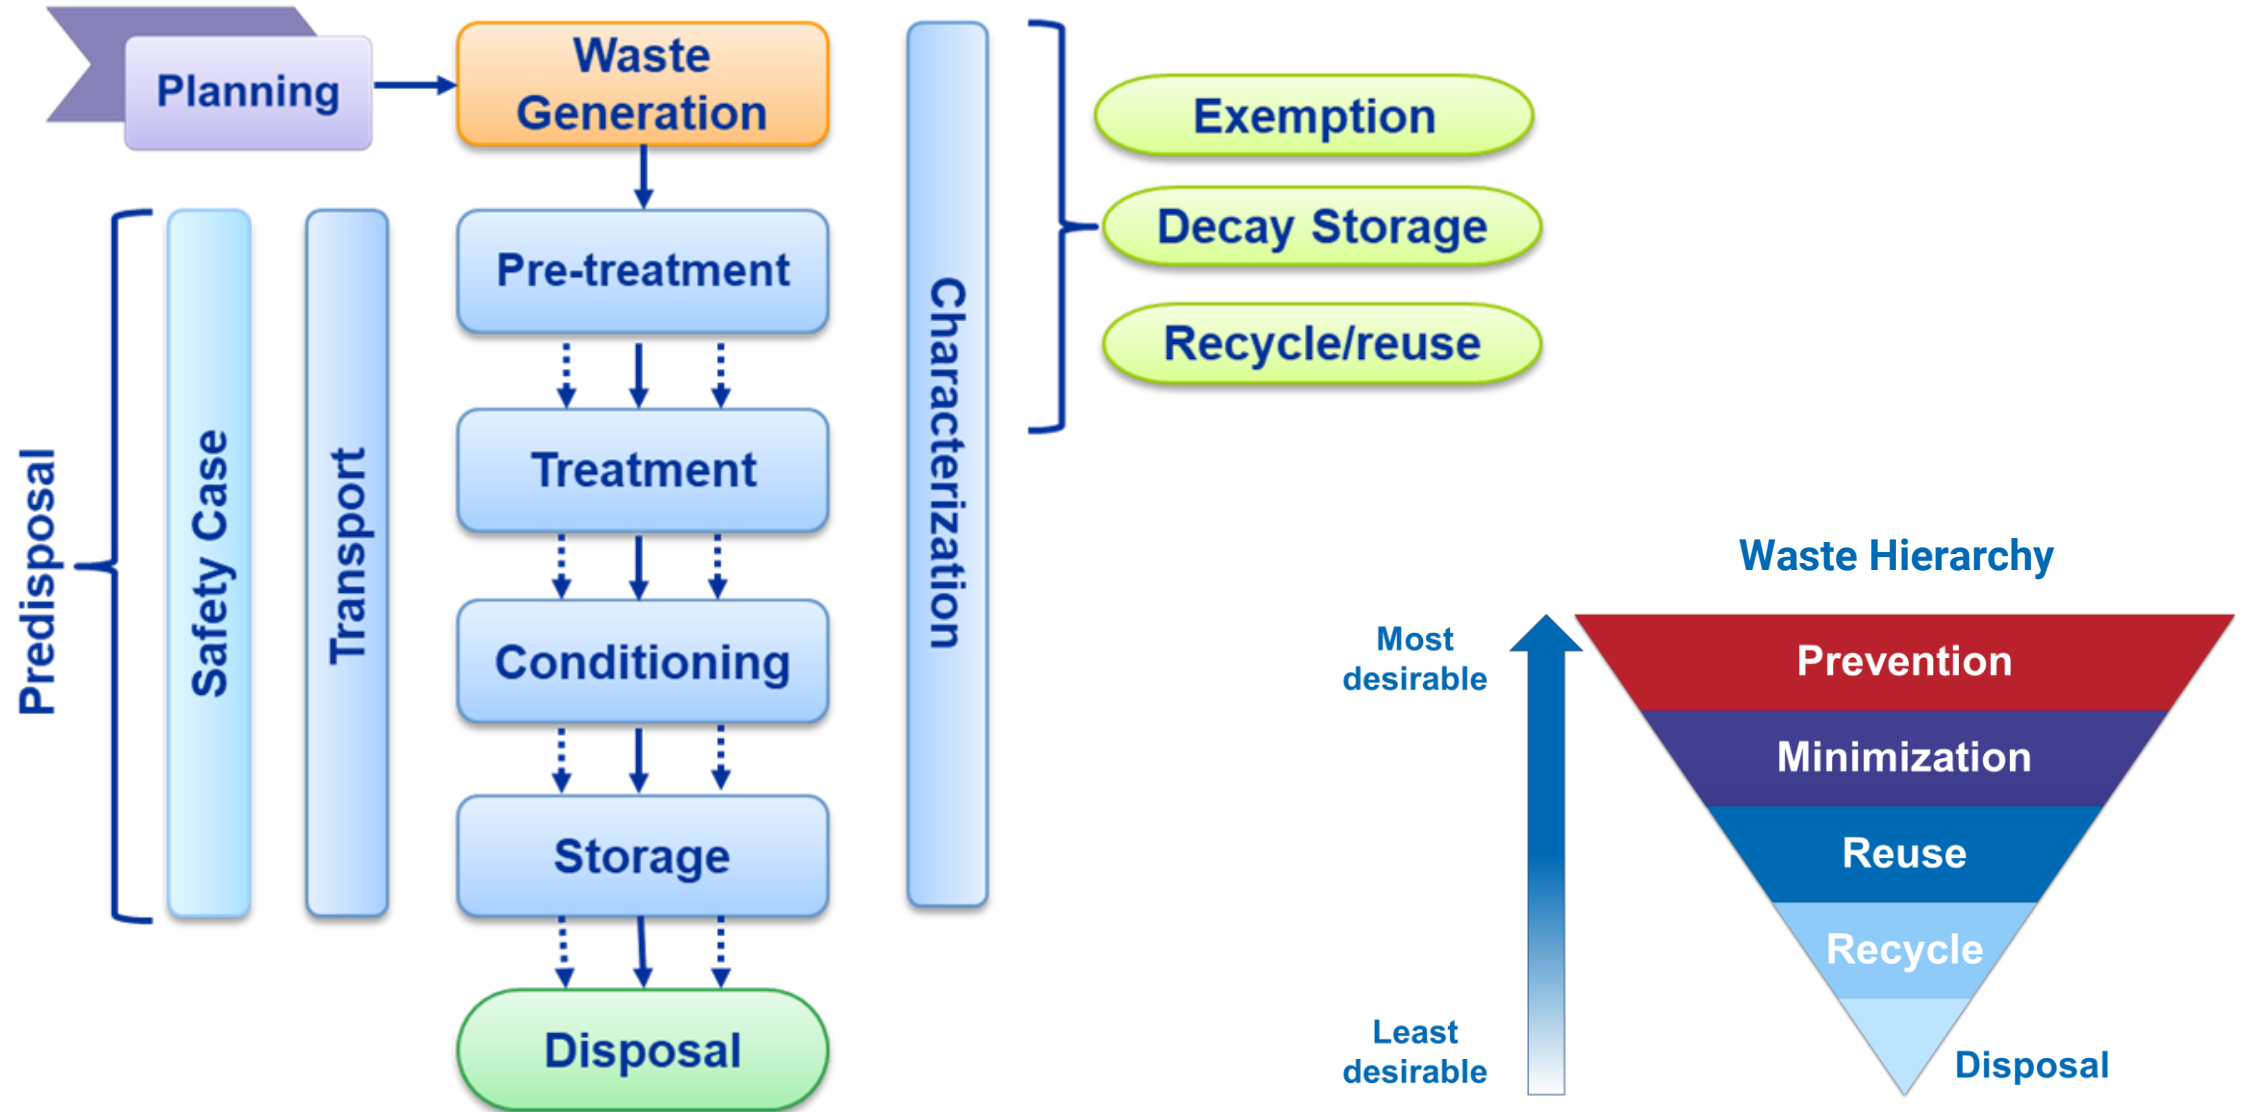

# Nuclear Back-End Liability Awareness

All countries are responsible to provide solutions for the safe, secure & safeguarded management of their national radioactive waste inventories. From generation to disposal: “Cradle-to-Grave”

Essential to provide comprehensive planning and provision for its life-cycle management from **generation to disposal**

# How is radioactive waste managed?

**IAEA**

# **Spent Research Reactor Fuel and Other Fissile Materials**

# Research Reactor Spent Fuel Management

- Lack of planning for spent fuel disposition
- Most research reactors store Spent Fuel (SF) in onsite pools
  - Sometimes these pools contain all the spent fuel accumulated since start of reactor operation
  - Also, they will continue to store SF with continued operation
- Little availability of back-end options for research reactor spent fuel, particularly in Non-nuclear Power Plant (NPP) countries
- Disposition options often unknown to Member State Decision Makers
  - Little experience with of what is involved in disposal of spent fuel or HLW
  - Costs for disposal unknown

 **Leads to “No Decision” option**

# Other Fissile Materials

## Other Fissile Materials Share Similar Challenges to Spent Fuel

- Capacity
- Safety
- Surveillance
- Operational costs

## Compatibility of Materials can Become a Factor

- Dissimilar metals
- Irregular Forms

# Pre-Disposal Options

- **Storage**
  - The holding of radioactive materials, spent fuel or radioactive waste in a facility that provides for its containment, with the intention of retrieval for final disposal
- **Pre-Disposal**
  - Any waste management steps carried out prior to disposal, such as pre-treatment, treatment, conditioning, storage and transport activities

# Spent Fuel Storage

NECSA

# Issues with Spent Fuel Storage

How much can be stored at a site?

For how long can it be safely stored?

What surveillance of the fuel is required?

What does it cost to maintain?

Will we need to construct additional storage?

Should the additional storage be dry storage?

What form of dry storage?

How soon can fuel be moved to additional storage?

What is the cost to transition to additional storage?

## Proceedings Series

### Management and Storage of Research Reactor Spent Nuclear Fuel

Proceedings of a Technical Meeting held in  
Thurso, United Kingdom, 19–22 October 2009

# Pre-Disposal Options

- **Treatment** - Operations intended to benefit safety and/or economy by changing the characteristics of the waste
  - Volume reduction
  - Removal of radionuclides from the waste
  - Change of composition
- **Conditioning** – Those operations that produce a waste package suitable for handling, transport, storage and/or disposal
  - Conversion of the waste to a solid waste form
  - Enclosure of the waste in containers
  - Provision of an overpack (if necessary)

# Treatment and Conditioning of Spent Fuel

## Consolidation

- Reduces volume
- Criticality limitations
- Heat generation considerations

Sarkar, S., & Mottl, V. (n.d.). *Regulatory Management of Research Reactor Spent Fuel Facilities in Australia - Managing a Cropping Incident.*

Hamodi, Nasir & Iqbal, Yaseen. (2009). Immobilization of Spent Ion Exchange Resin Arising From Nuclear Power Plants: An Introduction. J Pak Mater Soc. 3.

## Reprocessing

- Most comprehensive management option
- Substantially reduces volume
- Reduces reactivity and results in durable waste form
- Commercially available – very expensive

# Treatment & Conditioning Options For Other Fissile Materials

Waste Forms:  
Grout, Metallic,  
Vitrification,  
Supercompaction,  
Hot Isostatic Pressing

# Waste Processing & Storage Options

Pre-treatment

Collection

Sorting & segregation

Size Reduction

Surface Decontamination

Treatment

**Solid Waste**

- Low-force compaction
- Supercompaction
- Incineration
- Metal Melting
- Pyrolysis

**Liquid Waste**

- Ion exchange
- Filtration
- Chemical Separation
- Evaporation
- Membrane methods

Conditioning

**Solid Waste**

- Cementation
- Geopolymer
- Ceramic
- Vitrification
- Polymer

Packaging

Overpacking

Storage

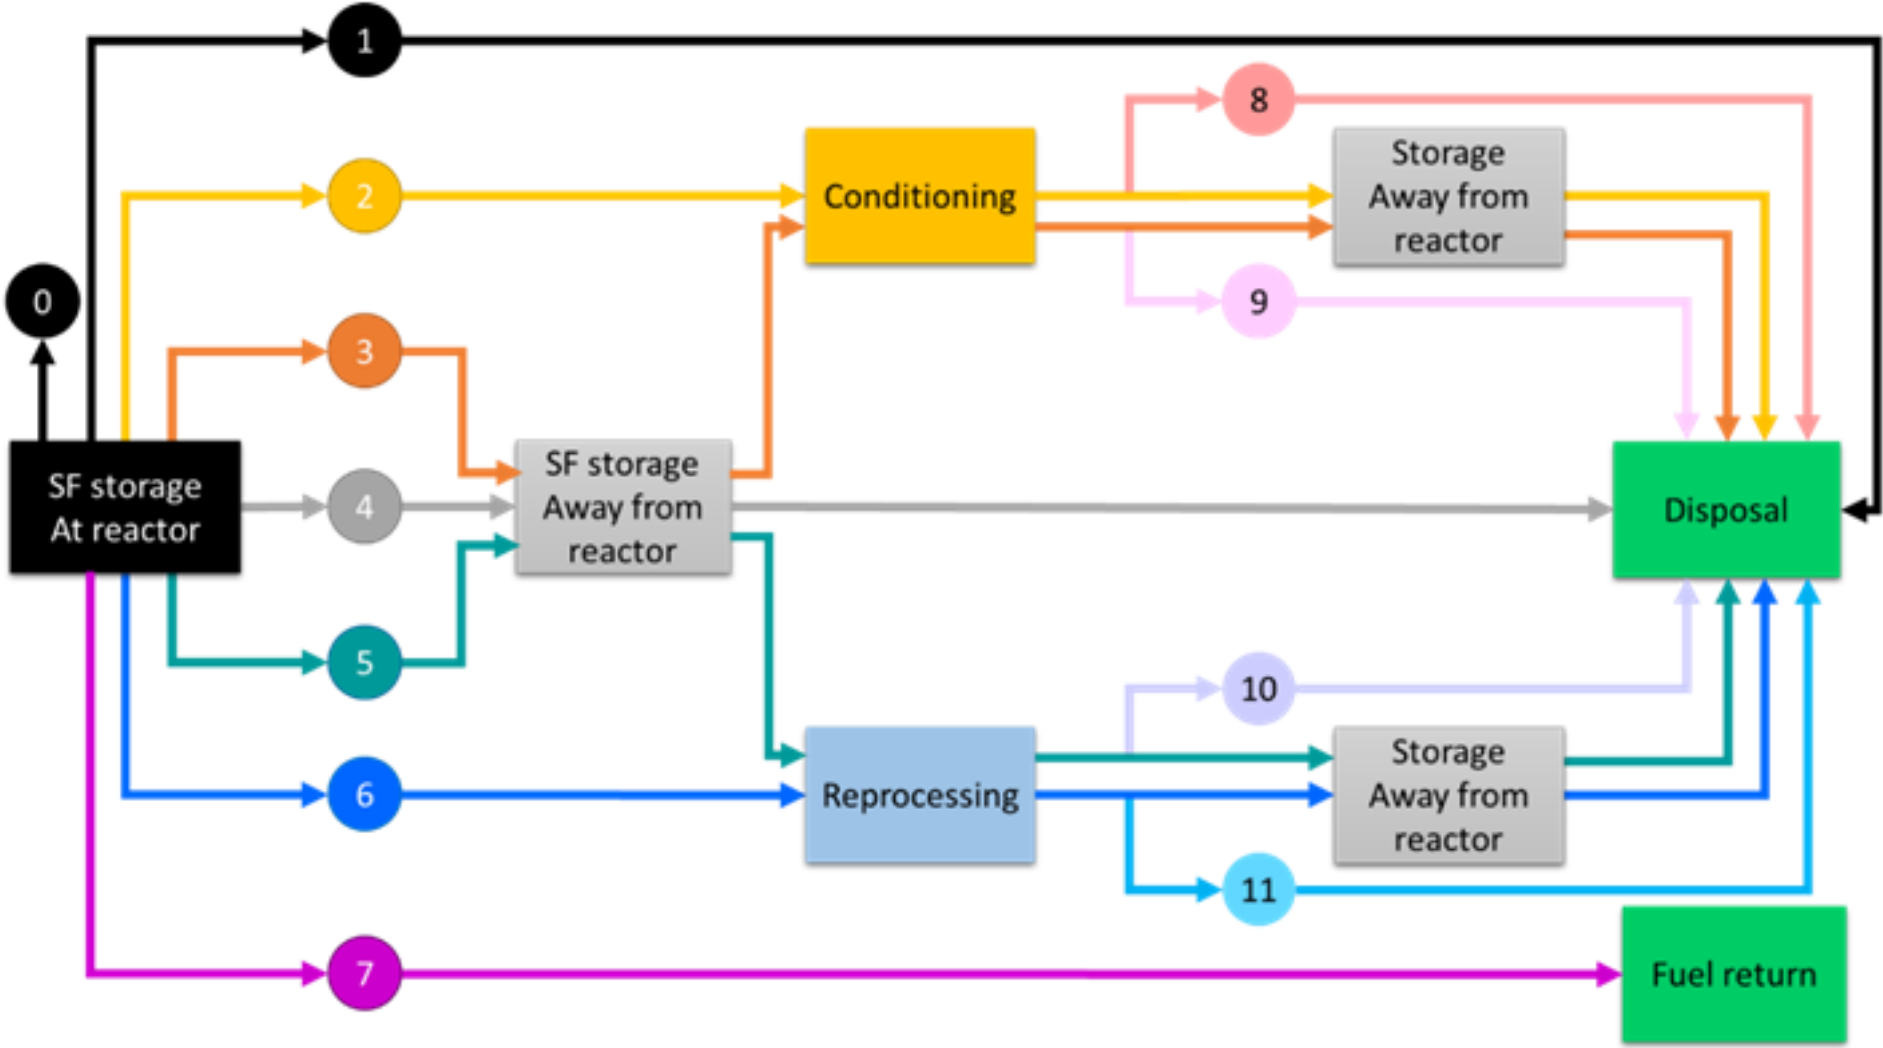

# Disposal

- **Emplacement of radioactive waste or spent fuel in an appropriate facility without the intention of retrieval**

# Technical Options for Fissile Materials

# Governmental Decision Making

## Factors

- Costs
- Technical Options
- Non-Economic Factors

- Legal and Regulatory
- Industrial and Technical
- Environmental Impact
- Human Resources
- Political Support

- Socioeconomic Factors
- Stakeholder Engagement
- Regional and International Partners
- Other Factors

**IAEA**

# **IAEA Tools To Support Key Radioactive Waste Management Policy & Strategy Decisions**

## **Backend Research reactor Integrated Decision-making Evaluation (BRIDE)**

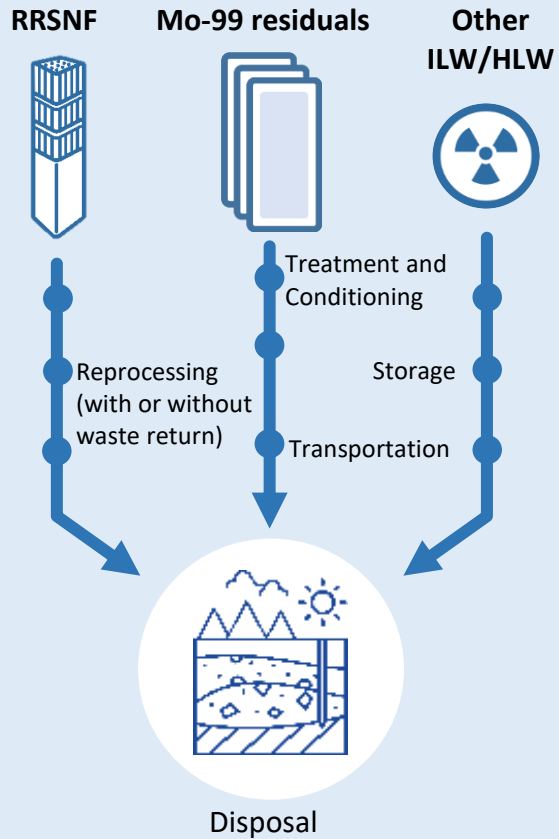

<https://www.iaea.org/online-learning/courses/2130/nuclear-back-end-webinar-series-45-using-the-bride-decision-support-tool-to-find-the-right-solution-for-fissile-material-disposition>

Keeps record for Summary Report

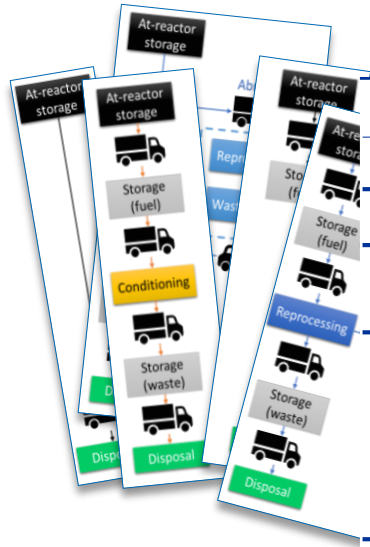

# The Unit Costs

For each scenario

Unit costs for each stage of scenario

RRSNF management stages Costs in €		
Stage	Cost Estimate (*Example*)	
At-reactor Storage	Annual Operating Cost	200 000
	Domestic Transportation Cost	300 000
Away from reactor Storage	Annual Operating Cost	1 000 000
	Capital Cost	0 (existing facility)
	D&D	200 000
Reprocessing Commercial Services	Shipment Cost (to and from)	1 000 000
	Reprocessing Cost	40 000 000
	Disposal of return waste	3 000 000
Domestic Conditioning	Annual Operating Cost	400 000
	Capital Cost	5 000 000
	Disposal of resulting waste	1 000 000
Geologic Repository	Annual Operating Cost	3 000 000
	Capital Cost	100 000 000
	D&D/Closure	2 000 000

•Real costs vary from country to country

# BRIDE Implementation – The Unit Costs

Scenario 4		Domestic Long Term Storage		Interim storage of RRSNF in monitored facility, followed by direct disposal of RRSNF						
RRSNF Management Stage		Nominal	Standard Deviation	Year Start	Year End	Capital Cost	Annual Operating Cost	Construction Period (y)	Annual Construction Cost	Construction Start Year
Domestic	At-reactor Storage	€ 1 000		0	20		€ 50		€ -	0

	Dilution/Stabilization						€ -		€ -	0
	Disposal						€ -		€ -	0
<b>Total</b>		<b>€ -</b>	<b>€ -</b>							
<b>Total Nominal Cost</b>		<b>€ 6 600</b>	<b>€ -</b>							

**USER NOTES**

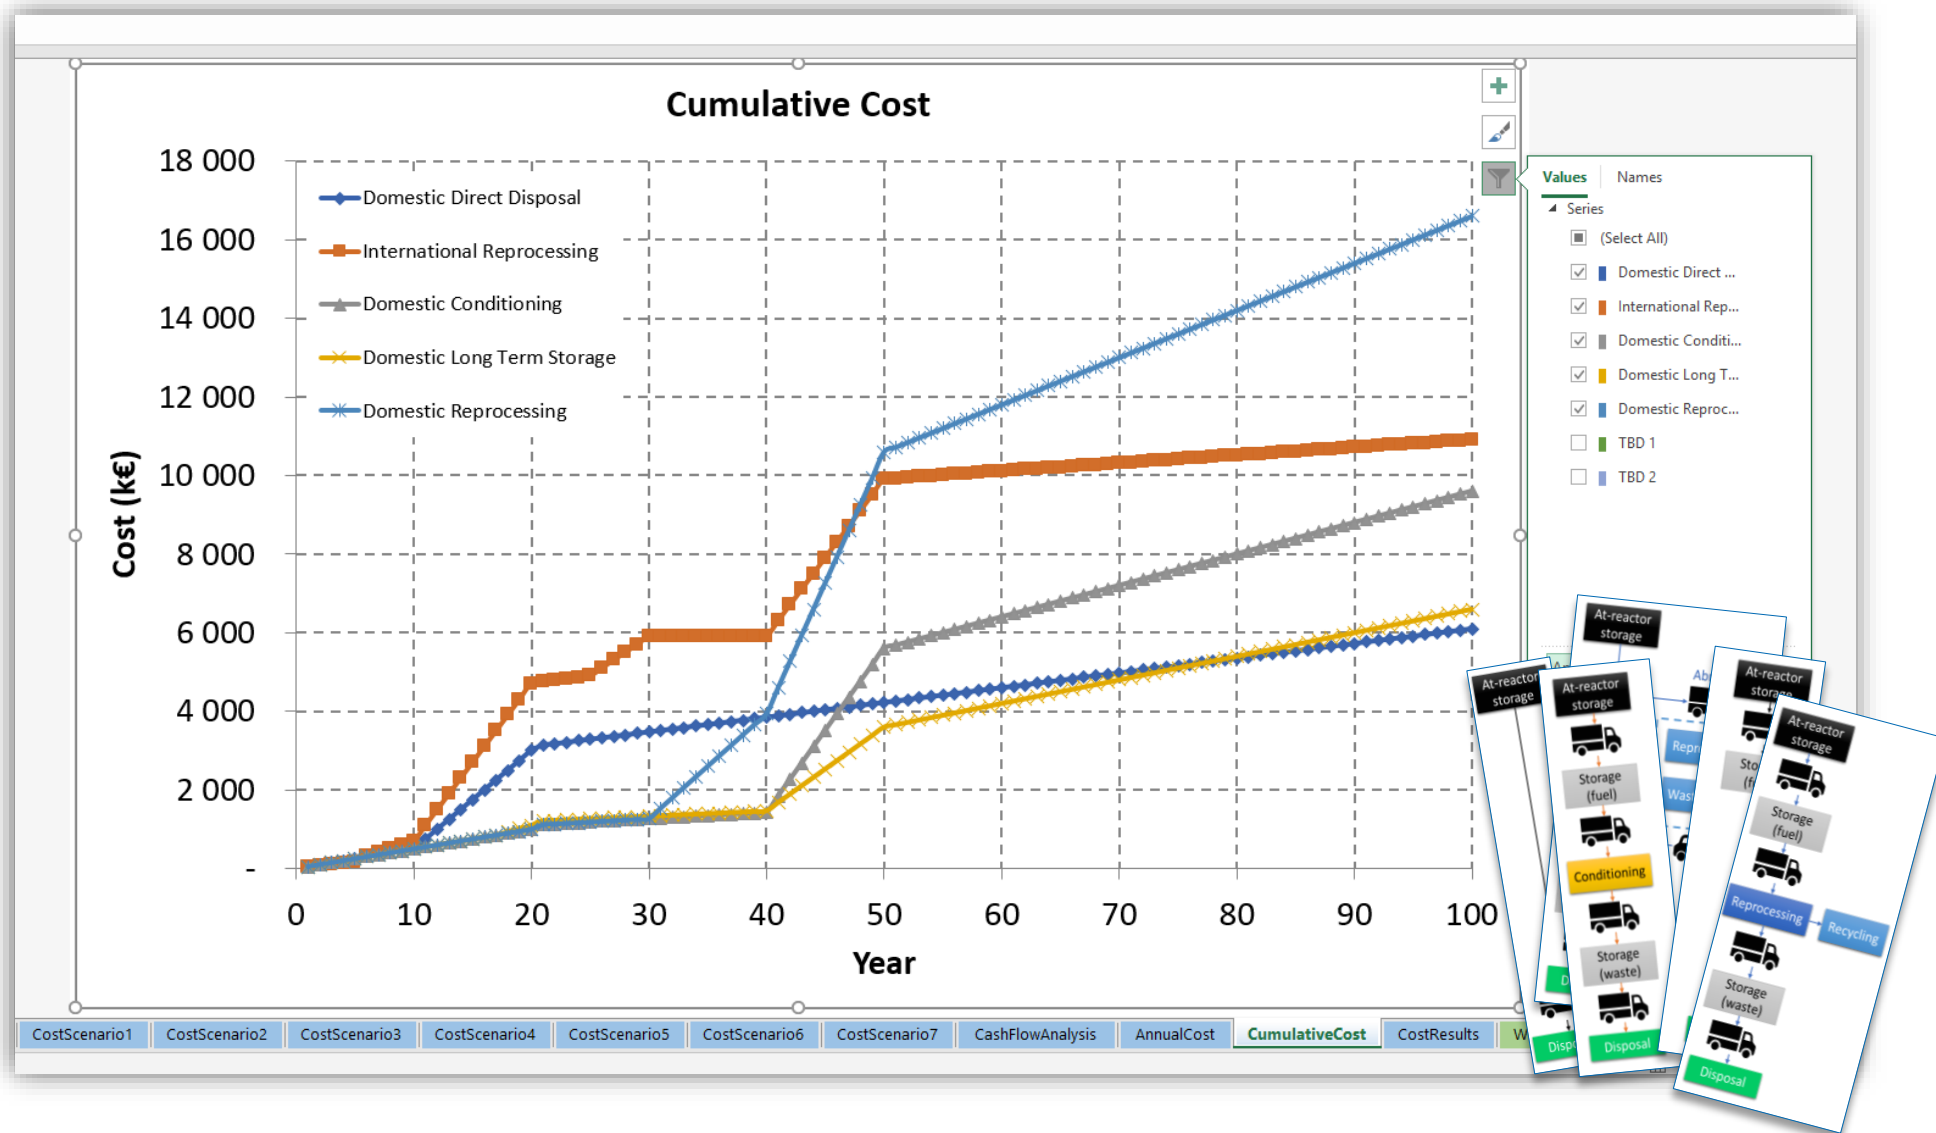

The typical RRSNF management stages are given in column A. The "Nominal" (expected) costs are entered in column D. Uncertainty estimates, if available, can be tracked in column E.

The time-based cash flow data is entered in columns G through K. The "Year Start" and "Year End" give the start and end operation period for that stage. Any related "Capital Cost" goes in column I, and the "Annual Operating Cost" is calculated as the difference between the "Nominal" cost and "Capital Cost", spread over the operation period. The "Annual Construction Cost" spreads the construction cost over the "Construction Period".

The annual cost for each stage is calculated and displayed from year 1 until year 100 of the model. The annual "Total nominal cost" is also calculated and displayed, and its result is used for the "Annual Cost" and "Cumulative Cost" graphs along with the Total Nominal Cost for the entire project.

# BRIDE Implementation – Cumulative Cost

# BRIDE Implementation – The Expert panel

- The expert panel is conformed by individuals from a diverse background (relevant to the RRSNF management) and whose input validates the decision-making process.
- These experts will assess the advantages and disadvantages of each scenario, and their likelihood to be implemented within the national framework

# BRIDE Implementation Results
