MultiSpectrometer: Wide Span and Quick Gamma Detection System

Friday, 24 October 2014 11:50 (40 minutes)

The MultiSpectrometer is a photonic spectrometry device which targets to quickly and precisely detect gamma photon inside fluids.

The poster will rely on:

- presentation of 3 inline industrial application (nuclear plant);
- features and performances of the system;
- spectrum examples acquired on production line (nuclear workshops);
- explanation on its ability to well suit to particular application
