

# Third International Conference on Nuclear Knowledge Management - Challenges and Approaches

Contribution ID: 7

Type: **poster**

## BATAN Activities in Developing Nuclear Knowledge Management

*Monday, 7 November 2016 17:00 (1 hour)*

BATAN (National Atomic Energy Agency of Indonesia) was established in 1964, and after the issuance of Law 10 of 1997 it became National Nuclear Energy Agency. During the last seven years, BATAN has suffered the loss of many of its valuable human resources due to the zero-growth policy of the government in recruiting new staffs. The uncertain future of nuclear power programme in Indonesia has also reduced the interest of young generation to study nuclear related subjects, resulting in the closing of several departments in universities that once offered nuclear sciences as subject of studies. These situations triggered management of BATAN to develop various efforts to keep nuclear knowledge exist and disseminate among BATAN itself, university students, and public as a whole. BATAN has in recent years established higher school of nuclear technology and organized various nuclear related training programmes, and also in cooperation with other governmental organizations establish nuclear zones, nuclear information centres and nuclear corners in public as well as in high school areas throughout Indonesia. All these efforts are aimed to transfer and preserve nuclear knowledge for the better future of the applications of nuclear science and technology in Indonesia.

### Country or International Organization

Indonesia

**Primary author:** Ms DARMAWATI, Suzie (National Nuclear Energy Agency (BATAN))

**Presenter:** Ms DARMAWATI, Suzie (National Nuclear Energy Agency (BATAN))

**Session Classification:** Poster Session

**Track Classification:** Track 1: Strategic and cross-cutting KM issues in organizations
