

# Third International Conference on Nuclear Knowledge Management - Challenges and Approaches

Contribution ID: 151

Type: **oral**

## Key Information File for Radioactive Waste Repositories

*Wednesday, 9 November 2016 14:00 (15 minutes)*

Part of the OECD/NEA RK&M initiative, the Key Information File (KIF) is a document designed to provide a summary of the existence, location and content of a radioactive waste repository. Its primary function would be to maintain both awareness of the site and long-term confidence in the effectiveness of the disposal system, so that the likelihood of unnecessary human disturbance is minimised. In order to ensure this document is accessible to a large audience, it would need to be limited in length. A draft format for the KIF has been proposed, and testing is being conducted on two cases, that of the “Centre de stockage de la Manche”, the closed French Repository (surface) and that of the planned Swedish Spent Fuel Repository (geological).

### Country or International Organization

OECD/NEA

**Primary author:** Mr DE LA CODRE, Pierre-Henri (OECD NEA)

**Presenter:** Mr DE LA CODRE, Pierre-Henri (OECD NEA)

**Session Classification:** Technical Session 11

**Track Classification:** Track 4: Managing knowledge for decommissioning, environmental remediation and radioactive waste management projects, including in countries with phase-out plans
