

Third International Conference on Nuclear Knowledge Management - Challenges and Approaches

Contribution ID: 62

Type: **oral**

Role of Training Reactor VR-1 in Nuclear Training in National and International Context

Thursday, 10 November 2016 14:15 (15 minutes)

The VR-1 reactor is the key facility in the field of nuclear educational and training in the Czech Republic. The reactor is equipped with several specific educational and training experimental devices and four training laboratories belonging to the reactor - laboratory for neutron interactions studies, laboratory for neutron activation analysis, radiation protection & environmental studies laboratory, and I&C laboratory. Educational and training activities at the reactor were step-by-step extended from domestic activities through the national and international levels up to regional multilateral activities. Future reactor operators and reactor physicists of Czech nuclear power plants have been trained at the reactor since 1992, also reactor physicists from nuclear power plants in Slovakia have been trained since 2002, and trainees from various nuclear developing countries have been also trained at the reactor since 2006. An effective procedure for implementing new experiments and new experimental devices has been developed during more than 25 years of the VR-1 reactor operation. Over 25 experiments can be carried out at the reactor at three levels: demonstration, standard, and advanced.

Country or International Organization

Czech Republic

Primary author: Mr SKLENKA, Lubomir (Czech Technical University)

Co-authors: Mr FRYBORT, Jan (Czech Technical University); Mr RATAJ, Jan (Czech Technical University in Prague)

Presenter: Mr SKLENKA, Lubomir (Czech Technical University)

Session Classification: Technical Session 16

Track Classification: Track 7: KM in nuclear technology research, development and innovation
