From Nuclear Information to Knowledge: The Role of INIS

Thursday, 10 November 2016 09:00 (15 minutes)

The International Nuclear Information System (INIS) once created to facilitate information exchange in the broad range of scientific and technical fields related to peaceful applications of nuclear power has evolved into a Knowledge Organization System (KOS) consisting of a digital repository and an advanced multi-language thesaurus. This paper gives a general description of the establishment, evolution and features of INIS not only as a digital repository but as one of the key resources of knowledge organization and preservation in the nuclear field.
