

# Analysis of runaway beam suppression experiments in FTU

*D. Carnevale, B. Esposito, M. Gospodarczyk, Zana Popovic et al.*

- RE beam current ramp-down via Ohmic circuit achieving full suppression
- FTU database: characterization of controlled/uncontrolled RE plateau
- Experimental findings on hysteretic properties of RE dynamics
- First results on:
  - energy spectrum data to characterize the RE beam energy
  - RE expulsion via MHD instabilities triggered by controlled Vloop
