The ratio of the women staff has been increased in the radiation safety department more than any other departments of the Korea's NPPs. In addition, the role of the women staffs has been diversified also into technical duties whereas did not in the past. So many women will show especially their ability in the radiation safety department.

In the past, the women staffs in the radiation safety department were usually charge of the non-technical duties like the radiation exposure dose management and the education for radiation workers. Although the ratio of the women about that is still higher, nowadays, the role of the women workers tends to diversify to technical supports like the radiation protection and the radioactive waste management while increased the proportion of women employees.

The trend which the role of women staff is becoming more important is expected to continue for many years to come.

Thus, in Korea's NPPs, it is expected that many women will demonstrate their professionalism especially in the radiation safety department than any other departments.
